## **Endocrine System:**

Hormones and the Endocrine System Bernhard Kleine, Winfried G. Rossmann, 2016-02-11 This book focuses on hormones and on how they are produced in very diverse regions of the body in humans and animals. But hormones can be found not only in vertebrates but also in insects, shellfish, spiders, mollusks, even at the origin of metazoan diversification and exhibit the same pathways of synthesis. The book addresses the different classes of hormones: protein peptides, hormones, steroids, and juvenile hormones, and hormones like catecholamines, thyroid hormones, and melatonin. It also discusses the types of hormone receptors, the majority of which are heptahelical G protein coupled receptors or nuclear receptors. Particular attention is paid to the organs where hormones are created, with specifics on hormonal production and release, while a dedicated chapter details hormonal regulation from very simple to highly complex schemes. The remarkable kinetics of hormones production are also shown. Before the book is rounded out by chapters on evolution in the endocrine system, the genetics of endocrine diseases, and doping.

**The Endocrine System, Third Edition** Salvatore Blair, Lynette Rushton, 2021-11-01 Much like the nervous system, the endocrine system relays important communication signals throughout the body. The endocrine system uses chemical signals known as hormones, which are produced and stored in special glands in the body. Different glands produce specialized hormones and release them into the bloodstream. From there, these hormones can travel directly to the tissues and organs and help regulate bodily functions. In *The Endocrine System, Third Edition*, learn how this chemical messaging system is vital to the body's growth, metabolism, and sexual development. Packed with full color photographs and illustrations, this absorbing book provides students with sufficient background information through references, websites, and a bibliography.
