chapters **Gender Differences in Math and Science Choices and Preferences** Amamah A. Alkhadrawi, 2015 The purpose of this dissertation is to discover how the myth of gender differences in STEM inform the lived experiences of male and female 12th graders in one high school in Northwest Ohio Over the years the observed gender gap favoring males over females in STEM ability has closed and female students have even surpassed males in some measures The fact that girls have met and exceeded boys in many measures of STEM ability over time suggests that the historical disparity was the result of social or psychological and not biological differences Even though schools have changed throughout the years to accommodate and encourage female students in STEM there is still a persistent disparity in participation at the highest levels of STEM in education and in careers Males still outnumber females in the more mathematical and technical sciences such as computer science and engineering This study applied feminist socialization theory and phenomenology as its theoretical framework The biggest themes that informed student s choices and preferences were as follows intended choices follow family influence myth persists in subtle ways teenagers have a limited future view and the chicken and the egg issues of personal interests versus social influence There are clearly more factors that contribute to this gender socialization which may be a combination of socioeconomic status and the influence of family **The Mathematics of Sex** Stephen J. Ceci, Wendy M. Williams, 2010 Compressing an enormous amount of information over 400 studies into a readable engaging account suitable for parents educators and policymakers this book advances the debate about women in science unlike any other book before it Bringing together important research from such diverse fields as endocrinology economics sociology education genetics and psychology the authors show that two factors the parenting choices women but not men have to make and the tendency of women to choose people oriented fields like medicine largely account for the under representation of women in the hard sciences *Women in Mathematics and Science* Yupin Bae, Thomas Max Smith, 1997 This report reviews the most current data on women s progress in mathematics and science achievement attitudes course taking patterns and college majors Results of recent studies suggest that many factors such as parental encouragement teacher preparation teacher student interactions curriculum content hands on laboratory experiences self concept attitudes toward mathematics and science availability of mentors and home resources contribute to the attitudes access and achievement of young women in mathematics and science The research cited here suggests that the gender gap in science and mathematics in the United States appears at Grade 10 while internationally the gap appears around Grade 8 Despite this there are still substantial differences between women and men in mathematics computer science engineering and science fields Contains 29 references DDR *Women and Minorities in Science, Technology, Engineering, and Mathematics* Ronald J. Burke, Mary C. Mattis, 2007-01-01 Scientific and technological advances and innovations are critical to the economic performance of developed countries and the standard of living of the citizens This book discusses the nature and size of the problem and shows why increasing the number of women and minorities in science technology engineering and mathematics industries is

mathematics at the nation's top research universities. Much of this congressionally mandated book is based on two unique surveys of faculty and departments at major U.S. research universities in six fields: biology, chemistry, civil engineering, electrical engineering, mathematics, and physics. A departmental survey collected information on departmental policies, recent tenure and promotion cases, and recent hires in almost 500 departments. A faculty survey gathered information from a stratified random sample of about 1,800 faculty on demographic characteristics, employment experiences, the allocation of institutional resources such as laboratory space, professional activities, and scholarly productivity. This book paints a timely picture of the status of female faculty at top universities, clarifies whether male and female faculty have similar opportunities to advance and succeed in academia, challenges some commonly held views, and poses several questions still in need of answers. This book will be of special interest to university administrators and faculty, graduate students, policy makers, professional and academic societies, federal funding agencies, and others concerned with the vitality of the U.S. research base and economy.

**How Much Do Gender Differences in Math and Science Participation Account for Gender Differences in High School Mathematics Achievement?** Darren Lauzon, 2001. Canadian results from the Third International Mathematics and Science Study (TIMSS) are used to assess the contribution of differences between boys and girls in high school mathematics participation to gender differences in the math component scores of the Science and Mathematics Literacy Test administered to a national sample of students in their final year of Secondary School. Random effects models are used to quantify this impact. For a sample of test takers who intended to go on to post-secondary education and who attended schools in which academic specialist tracks in math and science were available, boys performed better than girls by about 8 percent. Differences in math course taking explain about 12 percent of the gap. When differences in science course taking are also added, about 21 percent of the gap is accounted for.

**Teaching the Female Brain** Abigail Norfleet James, 2011-12-15. James' text is a wonderful resource for teachers and parents of girls. The practical suggestions for math and science teachers are an absolute highlight. If educators read and follow the encouraging suggestions in this book, more girls would be empowered to succeed in math and science.

Kate Broadley, Researcher, Alliance of Girls Schools. Incorporate brain-based research to empower girls in the classroom. As any classroom teacher can tell you, there are discernible differences in the way girls and boys learn. This engaging practical guide examines how girls' unique sensory, physical, cognitive, and emotional characteristics affect their performance in the classroom and shows you how to adapt classroom experiences to assist girls learning, particularly in math and science.

Abigail Norfleet James provides research-based findings to build your understanding of how females learn differently, whether in coed or single-sex settings, and clarifies assumptions held by both teachers and students about themselves. Inside, readers will find specific instructional techniques and practical applications for differentiating instruction in math and science. Ways of dealing with girls' stress. Up-to-date findings on left vs. right brain, learning styles of learning, and math anxiety. Resources, figures, and charts, as well as quizzes in each chapter that introduce

the topic and challenge preconceived notions of learning differences Teach in ways that complement the female brain and give girls the best education possible **Gender, Science and Mathematics** L. H. Parker,L. Rennie,B. Fraser,2014-01-15
