## **Governing Science Technology:**

**Governing Science and Technology** W. Henry Lambright, 1976 Policy and Governance of Science, Technology, and Innovation Gonzalo Ordóñez-Matamoros, Luis Antonio Orozco, Jaime Humberto Sierra-González, Isabel Bortagaray, Javier García-Estévez, 2021-10-19 This volume explores the governance and management of science technology and innovation STI in relation to innovation policy and governance systems highlighting its goal challenges and opportunities Divided into two sections it addresses the role of governments in promoting innovation in Latin American contexts as well as barriers and opportunities for STI governance in the region The chapters tackle the role of institutions innovation funding technological trajectories regional innovation policies innovation ecosystems universities knowledge appropriation and markets Researchers and scholars will find an opportunity to grasp a better understanding of innovation policies in emerging economies This interdisciplinary work presents original research on science technology and innovation policy and governance studies in an understudied region

**Governing Science and Technology** Malcolm L. Goggin, University of Houston-University Park. Institute for Higher Education Law and Governance, 1985\* **Governing Science and Technology in a Democracy** Malcolm L. Goggin, William A. Blanpied, 1986 Science, Technology, and Higher Education Luis Antonio Orozco, Gonzalo Ordóñez-Matamoros, Jaime Humberto Sierra-González, Javier García-Estévez, Isabel Bortagaray, 2021-10-19 This volume explores the governance and management of science technology and innovation STI in relation to social inclusion and sustainability highlighting its goal challenges and opportunities Divided into two sections it addresses the goals and institutional arrangements around sustainable development in the context of Latin American countries as well as the challenges of developing absorptive STI capacities for inclusion in the higher education institutions and systems The chapters tackle the important role of citizen science science diplomacy peace building mission oriented policies public innovation institutional entrepreneurs and policy networks Researchers and scholars will find an opportunity to better grasp several topics and methodologies in knowledge development in the governance of STI This interdisciplinary work presents original research on science technology and innovation policy and governance studies in an understudied region

Governing Science and Technology in a Democracy Malcolm L. Goggin, 1987 **Innovating Climate Governance** Bruno Turnheim, Paula Kivimaa, Frans Berkhout, 2018-03-29 After the perceived failure of global approaches to tackling climate change enthusiasm for local climate initiatives has blossomed world wide suggesting a more experimental approach to climate governance *Innovating Climate Governance Moving Beyond Experiments* looks critically at climate governance experimentation focusing on how experimental outcomes become embedded in practices rules and norms Policy which encourages local action on climate change rather than global burden sharing suggests a radically different approach to tackling climate issues This book reflects on what climate governance experiments achieve as well as what happens after and beyond these experiments A bottom up polycentric approach is analyzed exploring the outcomes of climate experiments and

how they can have broader transformative effects in society Contributions offer a wide range of approaches and cover more than fifty empirical cases internationally making this an ideal resource for academics and practitioners involved in studying developing and evaluating climate governance

**Governing Public Health** Mark L Flear,2015-07-30 This book contributes towards EU studies and the growing discourse on law and public health It uses the EU s governance of public health as a lens through which to explore questions of legal competence and its development through policy and concrete techniques processes and practices risk and security human rights and bioethics accountability and legitimacy democracy and citizenship and the nature essence and future trajectory of the European integration project These issues are explored first by situating the EU s public health strategy within the overarching architecture of governance and subsequently by examining its operationalisation in relation to the key public health problems of cancer HIV AIDS and pandemic planning The book argues that the centrality and valorisation of scientific and technical knowledge and expertise in the EU s risk based governance means that citizen participation in decision making is largely marginalised and underdeveloped and that this must change if public health and the quality accountability and legitimacy of EU governance and its regulation are to be improved Subsequently the book goes on to argue that the legitimating discourses of ethics and human rights and the developing notion of EU supra stewardship responsibility can help to highlight the normative dimensions of governance and its interventions in public health These discourses and dimensions provide openings and possibilities for citizens to power technologies of participation and contribute important supplementary knowledge to decision making

*Artificial Intelligence, Governance and Sustainable Development* Imad Antoine Ibrahim,Jon Truby,Paolo Davide Farah,2026-02-05 Considering the power and potential of AI and digital technologies very few studies have systematically analysed their potential for realizing SDG16 despite the role they are expected to play in realizing the 2030 agenda Exploring the problematic nature of artificial intelligence this book explores the significant advantages AI offers for successfully implementing Sustainable Development Goal 16 and the potential to track progress and impact though machine learning Focusing on governance the book explores the potential of AI to meet the SDGs within the categories of the rule of law criminal justice and ethics and access to justice Highlighting that the SDGs are a problematic human rights frame and have been critiqued as ignoring some major global disconnects when it comes to areas such as trade the book explores the potential for the application of AI to the achievement of the SDGs to be equally problematic and considers issues of techno colonialism information deficits and fundamental technological dependencies which could be exacerbated when AI meets the SDGs Offering an analysis of the role of AI and governance in securing peace development and security this book will be of interest to students and academics with an interest in international law political science and development

Technoscience and Citizenship: Ethics and Governance in the Digital Society Ana Delgado,2017-01-05 This book provides insights on how emerging technosciences come together with new forms of governance and ethical questioning Combining science and

technologies and ethics approaches it looks at the emergence of three key technoscientific domains body enhancement technologies biometrics and technologies for the production of space exploring how human bodies and minds the movement of citizens and space become matters of technoscientific governance The emergence of new and digital technologies pose new challenges for representative democracy and existing forms of citizenship As citizens encounter and have to adapt to technological change in their everyday life new forms of conviviality and contestation emerge This book is a key reference for scholars interested in the governance of emerging technosciences in the fields of science and technology studies and ethics

**Bioproperty, Biomedicine and Deliberative Governance** Dr Katerina Sideri, 2014-12-28 Biomedical patents have been the subject of heated debate Regulatory agencies such as the European Patent Office make small decisions with big implications which escape scrutiny and revision when they decide who has access to expensive diagnostic tests whether human embryonic stem cells can be traded in markets and under what circumstances human health is more important than animal welfare Moreover the administration of the Trade Related Aspects of Intellectual Property Rights by the World Trade Organization has raised considerable disquiet as it has arguably created grave health inequities Those doubting the merits of the one size fits all approach ask whether priority should be given to serving the present needs of populations in dire need of medication or to promoting global innovation The book looks in detail into the legal issues and ethical debates to ask the following three main questions First what are the ideas goals and broader ethical visions that underpin questions of governance and the legal reasoning employed by administrative agencies Second how can we democratize the decision making process of technocratic institutions such as the European Patent Office Finally how can we make the global intellectual property system more equitable In answering these questions the book seeks to contribute to our understanding of the role and function of regulatory agencies in the regulation of the bioeconomy explains the process of interpretation of legal norms and proposes ways to rethink the reform of the patent system through the lens of legitimacy

*Governing the White House* Charles Eliot Walcott, Karen Marie Hult, 1995 Charles Walcott and Karen Hult maintain that the organization of the White House influences presidential performance much more than commonly thought and that organization theory is an essential tool for understanding that influence Their book offers the first systematic application of organizational governance theory to the structures and operations of the White House Office Using organizational theory to analyze what at times has been a rather ad hoc and disorganized office might seem quixotic After all the White House Office exists within a turbulent political environment that encourages expedient decision making And every four to eight years it must be reinvented by presidents who have their own theories and preferences about how to organize a staff to serve their policy needs But Walcott and Hult argue that White House staffs are not simply puppets of presidential preference and style Yes staff structures evolve primarily from presidents strategic responses to external demands But those structures in turn significantly influence how the executive branch perceives and responds to further demands The first part of their book lays out the theoretical

argument The second examines White House outreach congressional liaison press relations personnel selection executive branch oversight and interest group and intergovernmental liaison The third focuses on White House handling of policy development and implementation The fourth analyzes staff structures that facilitate the operation of the presidency itself presidential writing and scheduling staff management and cabinet coordination The book concludes by identifying general patterns in the emergency nature and stability of governance structures in the White House Original and instructive *Governing the White House* provides a much needed primer on the inner workings of the White House staff and will be an essential volume for anyone studying the presidency **Science, Technology, and Democracy**, 1995 *Governing Science and Technology under the International Economic Order* Shin-yi Peng, Han-Wei Liu, Ching-Fu Lin, Against the backdrop of the recent trend towards megaregional trade initiatives this book addresses the most topical issues that lie at the intersection of law and technology By assessing international law and the political economy the contributing authors offer an enhanced understanding of the challenges of diverging regulatory approaches to innovation *Human Rights and Emerging Technologies* Daniele Ruggiu, 2018-06-26 What is the state of current European governance on new and emerging technologies and where is it going What is and what can be the role of human rights in governance arrangements These are the main questions that this book answers for both European and non European scholars It provides a wide picture of current European governance notably in biotechnology nanotechnology and synthetic biology and discusses the model of Responsible Research and Innovation which is gaining popularity within the European Union under a human rights perspective It shows how human rights can contribute to governance frameworks without posing obstacles to research and innovation The theory presented in the book is followed by practical guidelines drawn from human rights law Starting from the Strasbourg Court jurisprudence it provides a complete review of the wide range of rights that the European Convention on Human Rights protects in light of the challenges of techno scientific advances This analysis will come in handy for private actors policymakers regulators as well as judges in solving hard cases raised by techno scientific progress in the future **Report** ... Great Britain. Royal Commission on University Education in London, 1911 *Governance of Science and Technology Policies* Alan Paic, 2019 Abstract This document provides learnings from 13 case studies on governance mechanisms of national and supranational science technology and innovation initiatives As countries strive to resolve societal challenges mission oriented approaches complement traditional ones centred on national competitiveness specific industrial sectors or technologies Governance settings contribute overall to a more inclusive transparent and responsible STI system in particular through a whole of government approach the consultation of academia the private sector and civil society the implementation of strategies by professional agencies and the increasingly common use of evaluation Several critical dimensions facilitate the success of STI policies They include a commitment at the highest level of government strong public private collaboration in R D continuous evaluation and improvement a mission oriented approach coherence of policies and flexibility in setting

priorities as well as overall harmonisation and rationalisation of programmes in order to maximise efficiency and reduce duplication

*Science and Innovation* Aldo Geuna, Ammon J. Salter, William Edward Steinmueller, 2003 This book re-examines the rationale for public policy concluding that the prevailing public knowledge model is evolving towards a networked or distributed model of knowledge production and use in which public and private institutions play complementary roles It provides a set of tools and models to assess the impact of the new network model of funding and governance and argues that governments need to adapt their funding and administrative priorities and procedures to support the emergence and healthy growth of research networks The book goes on to explain that interdependencies and complementarities in the production and distribution of knowledge require a new and more contextual flexible and complex approach to government funding monitoring and assessment The chapters in this book issue a series of challenges to the next generation of science and technology policy The need for new systems of governance in science and innovation make a single all encompassing rationale for public funding unnecessary and irrelevant The new policy questions that matter concern the means and mechanisms for intervention the use of policy to harness support and expand the interaction and dynamism of research networks composed of public and private actors
