

The Graph Coloring Problem

Graphs are made of vertices connected by edges. If you color each vertex in a “unit graph” — where every edge is the same length — and require that connected vertices have different colors, what’s the minimum number of colors needed?

Simple graphs require two or three colors.

More complex graphs such as this “Moser spindle” need at least four.

Researchers have now found graphs that require at least five colors.

Mathematicians want to know if every graph — even those with an infinite number of vertices — can be colored with only five colors.
