## **Finite Reflection Groups:**

**Finite Reflection Groups** L.C. Grove, C.T. Benson, 2013-03-09 Chapter 1 introduces some of the terminology and notation used later and indicates prerequisites Chapter 2 gives a reasonably thorough account of all finite subgroups of the orthogonal groups in two and three dimensions The presentation is somewhat less formal than in succeeding chapters For instance the existence of the icosahedron is accepted as an empirical fact and no formal proof of existence is included Throughout most of Chapter 2 we do not distinguish between groups that are geometrically indistinguishable that is conjugate in the orthogonal group Very little of the material in Chapter 2 is actually required for the subsequent chapters but it serves two important purposes It aids in the development of geometrical insight and it serves as a source of illustrative examples There is a discussion of fundamental regions in Chapter 3 Chapter 4 provides a correspondence between fundamental reflections and fundamental regions via a discussion of root systems The actual classification and construction of finite reflection groups takes place in Chapter 5 where we have in part followed the methods of E Witt and B L van der Waerden Generators and relations for finite reflection groups are discussed in Chapter 6 There are historical remarks and suggestions for further reading in a Postlude *Finite Reflection Groups* Larry C. **Introduction to Finite Reflection Groups** Rachel Anne Sunley, 1994 **Mirrors and Reflections** Alexandre V. Borovik, Anna Borovik, 2009-11-07 *Mirrors and Reflections* presents a systematic and elementary introduction to the properties of finite groups generated by reflections The approach is based on fundamental geometric considerations in Coxeter complexes and emphasizes the intuitive geometric aspects of the theory of reflection groups The exposition is directed at advanced undergraduates and first year graduate students and features a large number of exercises at various levels of difficulty **Reflection Groups and Coxeter Groups** James E. Humphreys, 1992-10 This graduate textbook presents a concrete and up to date introduction to the theory of Coxeter groups The book is self contained making it suitable either for courses and seminars or for self study The first part is devoted to establishing concrete examples Finite reflection groups acting on Euclidean spaces are discussed and the first part ends with the construction of the affine Weyl groups a class of Coxeter groups that plays a major role in Lie theory The second part which is logically independent of but motivated by the first develops from scratch the properties of Coxeter groups in general including the Bruhat ordering and the seminal work of Kazhdan and Lusztig on representations of Hecke algebras associated with Coxeter groups is introduced Finally a number of interesting complementary topics as well as connections with Lie theory are sketched The book concludes with an extensive bibliography on Coxeter groups and their applications **Finite Reflection Groups** Paul Kornegay, 2008

**Characters of Finite Reflection Groups** Tara Smith, 1982 **Finite Reflection Groups in N Dimensions** Bhamini Navaratnarajah, 1984 [Finite Reflection Groups](#) Kathryn A. Perino, 1994 This thesis develops the classification of all finite reflection groups in  $R^{\supset n}$  First isometries and orthogonal transformations are discussed and any orthogonal

transformation is shown to be the product of reflections Next any finite group of isometries in the plane is shown to be cyclic or dihedral Roots systems and fundamental regions are introduced and these concepts enable one to classify finite reflection groups in  $\mathbb{R}^3$  Lastly root systems positive definite quadratic forms and Coxeter graphs are used to classify the finite reflection groups in  $\mathbb{R}^n$  and also to determine which of these groups are crystallographic [Finite reflection groups](#)

Taylor,2009-08-13 A complex reflection is a linear transformation which fixes each point in a hyperplane Intuitively it resembles the transformation an image undergoes when it is viewed through a kaleidoscope or arrangement of mirrors This book gives a complete classification of all groups of transformations of  $n$  dimensional complex space which are generated by complex reflections using the method of line systems In particular irreducible groups are studied in detail and are identified with finite linear groups reflection subgroups of reflection groups are completely classified the theory of eigenspaces of elements of reflection groups is discussed fully an appendix outlines links to representation theory topology and mathematical physics Containing over 100 exercises ranging in difficulty from elementary to research level this book is ideal for honours and graduate students or for researchers in algebra topology and mathematical physics [Schur Multipliers of Finite Reflection Groups](#) ,1971 *Invariants of Finite Reflection Groups* ,1968 [Finite Reflection Groups.
