

Chapter 1

Finite reflection groups

In this chapter we begin the study of finite groups generated by reflections in (real) euclidean spaces. Our main tool will be a well-chosen set of vectors ('roots') orthogonal to reflecting hyperplanes (1.2). A set of 'simple roots' (1.3) yields an efficient generating set for the group (1.5), leading eventually to a very simple presentation by generators and relations as a 'Coxeter group' (1.9). The latter part of the chapter treats a number of geometric and group-theoretic topics, all of which involve the 'parabolic' subgroups generated by sets of simple reflections (1.10), e.g., Poincaré polynomials (1.11), fundamental domains (1.12), and the Coxeter complex (1.15).

1.1 Reflections

Recall what is meant by a **reflection** in a (real) euclidean space V endowed with a positive definite symmetric bilinear form (λ, μ) . A reflection is a linear operator s on V which sends some nonzero vector α to its negative while fixing pointwise the hyperplane H_α orthogonal to α . We may write $s = s_\alpha$, bearing in mind however that $s_\alpha = s_{c\alpha}$ for any nonzero $c \in \mathbf{R}$. There is a simple formula:

$$s_\alpha \lambda = \lambda - \frac{2(\lambda, \alpha)}{(\alpha, \alpha)} \alpha.$$

Indeed, this is correct when $\lambda = \alpha$ and when $\lambda \in H_\alpha$; so it is correct for all $\lambda \in V = \mathbf{R}\alpha \oplus H_\alpha$. A quick calculation (left to the reader) shows that s_α is an orthogonal transformation, i.e., $(s_\alpha \lambda, s_\alpha \mu) = (\lambda, \mu)$ for all $\lambda, \mu \in V$. It is clear that $s_\alpha^2 = 1$, so s_α has order 2 in the group $O(V)$ of all orthogonal transformations of V .

A finite group generated by reflections (or **finite reflection group**, for short) is an especially interesting type of finite subgroup of $O(V)$.

Finite Reflection Groups:

Finite Reflection Groups L.C. Grove, C.T. Benson, 2013-03-09 Chapter 1 introduces some of the terminology and notation used later and indicates prerequisites Chapter 2 gives a reasonably thorough account of all finite subgroups of the orthogonal groups in two and three dimensions The presentation is somewhat less formal than in succeeding chapters For instance the existence of the icosahedron is accepted as an empirical fact and no formal proof of existence is included Throughout most of Chapter 2 we do not distinguish between groups that are geometrically indistinguishable that is conjugate in the orthogonal group Very little of the material in Chapter 2 is actually required for the subsequent chapters but it serves two important purposes It aids in the development of geometrical insight and it serves as a source of illustrative examples There is a discussion of fundamental regions in Chapter 3 Chapter 4 provides a correspondence between fundamental reflections and fundamental regions via a discussion of root systems The actual classification and construction of finite reflection groups takes place in Chapter 5 where we have in part followed the methods of E Witt and B L van der Waerden Generators and relations for finite reflection groups are discussed in Chapter 6 There are historical remarks and suggestions for further reading in a Postlude *Finite Reflection Groups* Larry C. Borovik, Anna Borovik, 2009-11-07 *Mirrors and Reflections* presents a systematic and elementary introduction to the properties of finite groups generated by reflections The approach is based on fundamental geometric considerations in Coxeter complexes and emphasizes the intuitive geometric aspects of the theory of reflection groups The exposition is directed at advanced undergraduates and first year graduate students and features a large number of exercises at various levels of difficulty **Reflection Groups and Coxeter Groups** James E. Humphreys, 1992-10 This graduate textbook presents a concrete and up to date introduction to the theory of Coxeter groups The book is self contained making it suitable either for courses and seminars or for self study The first part is devoted to establishing concrete examples Finite reflection groups acting on Euclidean spaces are discussed and the first part ends with the construction of the affine Weyl groups a class of Coxeter groups that plays a major role in Lie theory The second part which is logically independent of but motivated by the first develops from scratch the properties of Coxeter groups in general including the Bruhat ordering and the seminal work of Kazhdan and Lusztig on representations of Hecke algebras associated with Coxeter groups is introduced Finally a number of interesting complementary topics as well as connections with Lie theory are sketched The book concludes with an extensive bibliography on Coxeter groups and their applications **Finite Reflection Groups** Paul Kornegay, 2008
