**Computer Analysis** Wendell H. Cornet, 1975 Analysis and Design of Electronic Circuits Using PCs John Greenbaum, 1988 Since the mid 1960s the digital computer has been used as a design tool by electronic circuit designers Computer software programs called ECAP and 2 SCEPTRE were among the earliest circuit analysis codes to gain general acceptance by the design community These programs permitted circuit performance to be simulated for small signal frequency responses dc operation points and transient responses to varying input stimuli Unfortunately accessibility to programs such as these by the design community of that era was quite limited since they could be used solely on large expensive mainframe computers Only a fraction of the circuit designers at that time were employed by companies large enough to afford the acquisition and maintenance costs of these large computers The availability of personal computers PCs at moderate prices has dramatically changed this picture The sophistication of the PCs as well as the software that can be run on them has potentially put circuit performance simulation at every designer's desk Since the early days of ECAP and SCEPTRE the amount of software for circuit design and analysis has grown enormously At the same time the sophistication of the analyses provided by this software has correspondingly increased In addition the accuracy of simulation software has improved to where laboratory measurements have become a verification of the analyses rather than vice versa Nonlinear Dynamics Of Electronic Systems - Proceedings Of The Workshop Ndes '93 Anthony C Davies, Wolfgang Schwarz, 1994-05-31
