SenGupta,2004-07-23 Volume 17 in the Ion Exchange and Solvent Extraction series represents the vanguard of research on solvent extraction It covers the principles of electrolyte extraction and other subjects of increasing interest to the field This volume begins with pharmaceutical applications of supercritical fluid solvents particularly supercritical carbon dioxide It also contains chapters on liquid ion exchangers and relevant experiment protocols SCF applications in drug formulation and pollution reduction exploiting SCF as reaction media applications of metal bis dicarbollide in analytical chemistry and radioactive waste treatment and synergistic extraction of metal ions Volume 17 discusses the ion exchange isothermal supersaturation technique metal separation via pH induced parametric pumping modeling of ion exchange kinetics for ultrapure water and the engineering of activated carbons and carbonaceous materials for removal of metal ions and organic micropollutants in water Volume 17 cover topics that include supercritical fluid applications applications of metal bis dicarbollide and synergistic extraction of metal ions **Metal Interactions with Boron Clusters** Russell N. Grimes,2013-11-11 Molecular clusters in the broad sense that the term is commonly understood today comprise an enormous class of species extending into virtually every important area of chemistry naked metal clusters transition metal carbonyl clusters hydrocarbon cages such as cubane C₈H₈ and dodecahedrane C₂₀H₂₀ organometallic cluster complexes enzymes containing Fe S or MoFe S₄Fe₄S₄ cores high polymers based on carborane units and of course the many kinds of polyhedral borane species So large is the area spanned by these diverse classes that any attempt to deal with them comprehensively in one volume would to say the least be ambitious and also premature We are presently at a stage where intriguing relationships between the various cluster families are becoming apparent particularly in terms of bonding descriptions and despite large differences in their chemistry an underlying unity is gradually developing in the field For example structural changes occurring in Fe S cores as electrons are pumped in and out in some measure resemble those observed in boranes and carboranes The cleavage of alkynes via incorporation into carborane cages and subsequent cage rearrangement a sequence familiar to boron chemists is a thermodynamically favored process which may be related to the behavior of unsaturated hydrocarbons on metal surfaces analogies of this sort have drawn attention from theorists and experimentalists **Electrochemical Data** Louis Meites, Petr Zuman,1974 **Journal of the American Chemical Society** American Chemical Society,1923 Proceedings of the Society are included in v 1 59 1879 1937 The Principles of Applied Electrochemistry Arthur Allmand,1920 Tutorial Lectures in Electrochemical Engineering and Technology R.
