From Model-Driven Design to Resource Management for Distributed Embedded Systems Bernd Kleinjohann, Lisa Kleinjohann, Ricardo J. Machado, Carlos Pereira, P.S. Thiagarajan, 2007-01-29 Embedded computing systems have started to carry out the key control functions in diverse domains such as telecommunications automotive electronics avionics and even complete industrial manufacturing lines Traditionally such embedded control systems have been implemented in a monolithic centralized manner However distributed and parallel solutions have been steadily gaining popularity In a distributed setup the control task is carried out by a number of controllers distributed over the entire system and interconnected as a network by communication components such as field buses More demanding local control applications require controllers based on parallel architectures or processors with dedicated co processors Distribution and parallelism in embedded system design increase the engineering challenges and demand new development methods and tools From Model Driven Design to Resource Management for Distributed Embedded Systems contains 16 original contributions as well as 12 invited papers by distinguished invited speakers These papers were presented at the Working Conference on Distributed and Parallel Embedded Systems DIPES 2006 which was held in October 2006 in Braga Portugal and sponsored by the International Federation for Information Processing IFIP This volume covers the following very timely topics model driven design test and evolution of embedded systems timing analysis and predictability scheduling allocation communication and resource management in distributed real time systems

Models in Ecosystem Science Charles Draper William Canham, Jonathan J. Cole, William K. Lauenroth, 2003-11-30 Quantitative models are crucial to almost every area of ecosystem science They provide a logical structure that guides and informs empirical observations of ecosystem processes They play a particularly crucial role in synthesizing and integrating our understanding of the immense diversity of ecosystem structure and function Increasingly models are being called on to predict the effects of human actions on natural ecosystems Despite the widespread use of models there exists intense debate within the field over a wide range of practical and philosophical issues pertaining to quantitative modeling This book which grew out of a gathering of leading experts at the ninth Cary Conference explores those issues The book opens with an overview of the status and role of modeling in ecosystem science including perspectives on the long running debate over the appropriate level of complexity in models This is followed by eight chapters that address the critical issue of evaluating ecosystem models including methods of addressing uncertainty Next come several case studies of the role of models in environmental policy and management A section on the future of modeling in ecosystem science focuses on increasing the use of modeling in undergraduate education and the modeling skills of professionals within the field The benefits and limitations of predictive versus observational models are also considered in detail Written by stellar contributors this book grants access to the state of the art and science of ecosystem modeling
