## **Genetic Learning For Adaptive Image Segmentation:**

**Genetic Learning for Adaptive Image Segmentation** Bir Bhanu, Sungkee Lee, 2012-12-06 Image segmentation is generally the first task in any automated image understanding application such as autonomous vehicle navigation object recognition photointerpretation etc All subsequent tasks such as feature extraction object detection and object recognition rely heavily on the quality of segmentation One of the fundamental weaknesses of current image segmentation algorithms is their inability to adapt the segmentation process as real world changes are reflected in the image Only after numerous modifications to an algorithm s control parameters can any current image segmentation technique be used to handle the diversity of images encountered in real world applications Genetic Learning for Adaptive Image Segmentation presents the first closed loop image segmentation system that incorporates genetic and other algorithms to adapt the segmentation process to changes in image characteristics caused by variable environmental conditions such as time of day time of year weather etc Image segmentation performance is evaluated using multiple measures of segmentation quality These quality measures include global characteristics of the entire image as well as local features of individual object regions in the image This adaptive image segmentation system provides continuous adaptation to normal environmental variations exhibits learning capabilities and provides robust performance when interacting with a dynamic environment This research is directed towards adapting the performance of a well known existing segmentation algorithm Phoenix across a wide variety of environmental conditions which cause changes in the image characteristics The book presents a large number of experimental results and compares performance with standard techniques used in computer vision for both consistency and quality of segmentation results These results demonstrate a the ability to adapt the segmentation performance in both indoor and outdoor color imagery and b that learning from experience can be used to improve the segmentation performance over time

*Data Mining: A Heuristic Approach* Abbass, Hussein A., Sarker, Ruhul, Newton, Charles S., 2001-07-01 Real life problems are known to be messy dynamic and multi objective and involve high levels of uncertainty and constraints Because traditional problem solving methods are no longer capable of handling this level of complexity heuristic search methods have attracted increasing attention in recent years for solving such problems Inspired by nature biology statistical mechanics physics and neuroscience heuristics techniques are used to solve many problems where traditional methods have failed Data Mining A Heuristic Approach will be a repository for the applications of these techniques in the area of data mining
