**Endangered Minds** Jane M. Healy, 2011-07-19 Is today's fast paced media culture creating a toxic environment for our children's brains In this landmark bestselling assessment tracing the roots of America's escalating crisis in education Jane M Healy Ph D examines how television video games and other components of popular culture compromise our children's ability to concentrate and to absorb and analyze information Drawing on neuropsychological research and an analysis of current educational practices Healy presents in clear understandable language How growing brains are physically shaped by experience Why television programs even supposedly educational shows like Sesame Street develop habits of mind that place children at a disadvantage in school Why increasing numbers of children are diagnosed with attention deficit disorder How parents and teachers can make a critical difference by making children good learners from the day they are born

**Endangered Minds** Jane M. Healy, 1990 *Shades of Loneliness* Richard Stivers, 2004-02-09 To varying degrees loneliness has us all in its grip In this incisive and controversial book Richard Stivers rejects the recent emphasis on genetic explanations of psychological problems arguing that the very organization of technological societies is behind the pervasive experience of loneliness The extreme rationality that governs our institutions and organizations results in abstract and impersonal relationships in much of daily life Moreover as common meaning is gradually eroded our connections to others become vague and tenuous Our ensuing fear and loneliness however can be masked by an outgoing extroverted personality In its extreme form loneliness assumes pathological dimensions in neurosis and schizophrenia Stivers maintains that even here the causes remain social The various forms of neuroses and psychoses follow the key contradictions of a technological society For instance narcissism and depression reflect the tension between power and meaninglessness that characterizes modern societies Stivers demonstrates that there is a continuum from the normal technological personality through the various neuroses to full blown schizophrenia He argues that all forms of loneliness emanate from the same cause they likewise share a common dynamic despite their differences Loneliness in its many manifestations seems to be the price we must pay for living in the modern world Yet nurturing family friend and community ties can mitigate its culturally and psychologically disorganizing power This book is a clarion call for a renewal of moral awareness and custom to combat the fragmentation and depersonalization of our technological civilization **Endangered Minds: Why Children Don't**

**Think--And What We Can Do about It** Jane M. Healy, 1999-10 First published in 1990 *Endangered Minds* argues that children today aren't as able to concentrate analyze and think as clearly as in the past because of fast paced lifestyles and electronic media 17 500 [The Sibling Society](#) Robert Bly, 1997-05-27 Where have all the grownups gone In answering that question with the same freewheeling erudition and intuitive brilliance that made *Iron John* a national bestseller poet storyteller and translator Robert Bly tells us that we live in a sibling society in which adults have regressed into adolescence and adolescents refuse to grow up **The Flickering Mind** Todd Oppenheimer, 2004-12-07 *The Flickering Mind* by

National Magazine Award winner Todd Oppenheimer is a landmark account of the failure of technology to improve our schools and a call for renewed emphasis on what really works American education faces an unusual moment of crisis For decades our schools have been beaten down by a series of curriculum fads empty crusades for reform and stingy funding Now education and political leaders have offered their biggest and most expensive promise ever the miracle of computers and the Internet at a cost of approximately 70 billion just during the decade of the 1990s Computer technology has become so prevalent that it is transforming nearly every corner of the academic world from our efforts to close the gap between rich and poor to our hopes for school reform to our basic methods of developing the human imagination Technology is also recasting the relationships that schools strike with the business community changing public beliefs about the demands of tomorrow s working world and reframing the nation s systems for researching testing and evaluating achievement All this change has led to a culture of the flickering mind and a generation teetering between two possible futures In one youngsters have a chance to become confident masters of the tools of their day to better address the problems of tomorrow Alternatively they can become victims of commercial novelties and narrow measures of ability underscored by misplaced faith in standardized testing At this point America s students can t even make a fair choice They are an increasingly distracted lot Their ability to reason to listen to feel empathy is quite literally flickering Computers and their attendant technologies did not cause all these problems but they are quietly accelerating them In this authoritative and impassioned account of the state of education in America Todd Oppenheimer shows why it does not have to be this way Oppenheimer visited dozens of schools nationwide public and private urban and rural to present the compelling tales that frame this book He consulted with experts read volumes of studies and came to strong and persuasive conclusions that the essentials of learning have been gradually forgotten and that they matter much more than the novelties of technology He argues that every time we computerize a science class or shut down a music program to pay for new hardware we lose sight of what our priority should be enlightened basics Broad in scope and investigative in treatment *The Flickering Mind* will not only contribute to a vital public conversation about what our schools can and should be it will define the debate
