The Book of the Hopi Frank Waters, 1977-06-30 The secrets of the Hopi road of life revealed for the first time in written form In this strange and wonderful book thirty elders of the ancient Hopi tribe of Northern Arizona a people who regard themselves as the first inhabitants of America freely reveal the Hopi worldview for the first time in written form The Hopi kept this view a secret for countless centuries and anthropologists have long struggled to understand it Now they record their myths and legends and the meaning of their religious rituals and ceremonies as a gift to future generations Here is a reassertion of a rhythm of life we have disastrously tried to ignore and instincts we have tragically repressed and a reminder that we must attune ourselves to the need for inner change if we are to avert a cataclysmic rupture between our minds and hearts

Schmitz, 2016-10-24 In the new media environment how are bodies and images related How can in other words the human body be integrated with and reformulated in relation to the sensory and perceptual dimension In response to this question *Image Embodiment* looks not just to images and surface appearances but addresses at a deeper level the media that act as the supports for aesthetics To

think about visual culture in the twenty first century necessarily implies the thinking of the specific role of media technologies A view to media not only teases out the technical infrastructure of images but brings with it the potential for addressing the different sense modalities and realities of the human body Recent theories of the sensory turn are effectively highlighting innovative approaches for an autonomous image science and media theory in general Image Embodiment provides one part of the discourse to synchronize the concepts of image and body which is then able to connect the perspectives of philosophy of mind perceptual theory and media as well as image science This volume monitors and discusses the relation of media and the human body and refers to images embodiment and the sensory turn within the perspective of an autonomous image science
