Enabling Technologies For Unified Life Cycle Engineering Of Structural Components:

Enabling Technologies for Unified Life-Cycle Engineering of Structural Components National Research Council, Division on Engineering and Physical Sciences, National Materials Advisory Board, Commission on Engineering and Technical Systems, Committee on Enabling Technologies for Unified Life-Cycle Engineering of Structural Components, 1991-02-01 Unified life cycle engineering ULCE or concurrent engineering is a design engineering environment in which computer aided design technology is used to assess and improve the quality of a product not only during the active design phases but throughout its entire life cycle This is achieved by integrating and optimizing the design attributes for producibility and supportability as well as for performance operability cost and schedule This book addresses ULCE approaches to design manufacture and application of structural components especially for advanced military systems Conclusions and recommendations to support the development of an effective ULCE design engineering environment are presented

Enabling Technologies for Unified Life-Cycle Engineering of Structural Components, 1991 This report addresses the application of unified life cycle engineering approaches to the design manufacture and application of structural components especially structural components for advanced military weapons systems Unified life cycle engineering ULCE or concurrent engineering is a design engineering environment in which computer aided design technology is used to assess and improve the quality of a product not only during the active design phases but throughout its entire life cycle by integrating and optimizing design attributes for producibility and supportability as well as for performance operability cost and schedule The study identifies and evaluates priorities for research and development in life cycle engineering with the goal of identifying the enabling technologies that underpin ULCE their readiness for application and the research and development required to make them commercially available in a 10 year period The committee examined the current and desired future environments for five factors in a product s life cycle design manufacture product support materials and information systems Four critical issues are identified and conclusions and recommendations to support the development of an effective ULCE design engineering environment are defined

Computer-Aided Materials Selection During Structural Design National Research Council, Division on Engineering and Physical Sciences, National Materials Advisory Board, Commission on Engineering and Technical Systems, Committee on Application of Expert Systems to Materials Selection During Structural Design, 1995-04-03 The selection of the proper materials for a structural component is a critical activity that is governed by many often conflicting factors Incorporating materials expert systems into CAD CAM operations could assist designers by suggesting potential manufacturing processes for particular products to facilitate concurrent engineering recommending various materials for a specific part based on a given set of characteristics or proposing possible modifications of a design if suitable materials for a particular part do not exist This book reviews the structural design process determines the elements and capabilities required for a materials selection expert system to assist design engineers

and recommends the areas of expert system and materials modeling research and development required to devise a materials specific design system Knowledge Management in Construction Chimay J. Anumba, Charles Egbu, Patricia Carrillo, 2008-04-15 A key problem facing the construction industry is that all work is done by transient project teams and in the past there has been no structured approach to learning from projects once they are completed Now though the industry is adapting concepts of knowledge management to improve the situation This book brings together 13 contributors from research and industry to show how managing construction knowledge can bring real benefits to organisations and projects It covers a wide range of issues from basic definitions and fundamental concepts to the role of information technology and engendering a knowledge sharing culture Practical examples from construction and other industry sectors are used throughout to illustrate the various dimensions of knowledge management The challenges of implementing knowledge management are outlined and the ensuing benefits highlighted *Nonconventional Concrete Technologies* Committee on Nonconventional Concrete Technologies for Renewal of the Highway Infrastructure, Commission on Engineering and Technical Systems, National Materials Advisory Board, Division on Engineering and Physical Sciences, National Research Council, 1997-04-08 Nonconventional Concrete Technologies Renewal of the Highway Infrastructure identifies research and development opportunities in innovative nonconventional materials and processes that have the potential to accelerate the construction process improve the durability of highway pavement and bridges and enhance the serviceability and longevity of new construction under adverse conditions *Computerization and Networking of Materials Databases* Charles P.
