**Affect and Emotion in Human-Computer Interaction** Christian Peter, Russell Beale, 2008-08-25 Affect and emotion play an important role in our everyday lives They are present whatever we do wherever we are and wherever we go without us being aware of them for much of the time When it comes to interaction be it with humans technology or humans via technology we suddenly become more aware of emotion either by seeing the other s emotional expression or by not getting an emotional response while anticipating one Given this it seems only sensible to explore affect and emotion in human computer interaction to investigate the underlying principles to study the role they play to develop methods to quantify them and to finally build applications that make use of them This is the research field for which over ten years ago Rosalind Picard coined the phrase affective computing The present book provides an account of the latest work on a variety of aspects related to affect and emotion in human technology interaction It covers theoretical issues user experience and design aspects as well as sensing issues and reports on a number of affective applications that have been developed in recent years

*Probing Experience* Joyce Westerink, Martin Ouwerkerk, Therese J. M. Overbeek, W. Frank Pasveer, 2007-12-22 Fred Boekhorst Steady progress in Information and Communication technology has advanced the Internet once merely a tool for exchange of scientific information between universities to a platform that enables the transformation of our society In this new digital society people can take more informed decisions because of new mechanisms for finding what you're looking for Google new mechanisms of accessing background knowledge Wikipedia new ways of engaging with one another chat new ways of trading goods eBay and many more While these represent already profound changes in our lifestyle the effects of digitizing society have just begun So far the Internet has made information accessible through computer screens but the next wave will be The Internet of Things Environments will become smart and responsive to the presence of people and objects

**Heart of the Machine** Richard Yonck, 2017-03-07

Imagine a robotic stuffed animal that can read and respond to a child's emotional state a commercial that can recognize and change based on a customer's facial expression or a company that can actually create feelings as though a person were experiencing them naturally. Heart of the Machine explores the next giant step in the relationship between humans and technology the ability of computers to recognize respond to and even replicate emotions. Computers have long been integral to our lives and their advances continue at an exponential rate. Many believe that artificial intelligence equal or superior to human intelligence will happen in the not too distant future some even think machine consciousness will follow. Futurist Richard Yonck argues that emotion the first most basic and most natural form of communication is at the heart of how we will soon work with and use computers. Instilling emotions into computers is the next leap in our centuries old obsession with creating machines that replicate humans. But for every benefit this progress may bring to our lives there is a possible pitfall. Emotion recognition could lead to advanced surveillance and the same technology that can manipulate our feelings could become a method of mass control. And as shown in movies like Her and Ex Machina our society already holds a deep seated anxiety about what might happen if machines could actually feel and break free from our control. Heart of the Machine is an exploration of the new and inevitable ways in which mankind and technology will interact.

for this study because they use computer based technologies in their daily work The conceptual framework underlying this research is feminist standpoint theory Standpoint theory in this study stems from the work of Harding 1991 who has grounded standpoint theory in eight claims These claims were connected to clusters that were organized into segments that could be contrasted compared and analyzed Themes were developed and photographs were used to operationalize the cluster categories Methodology used for this study included three structured interviews The first interview elicited background information Interview two used the photographs as an auto driving technique to stimulate discussion The third interview asked the respondents to validate their narratives and to describe their reactions to the feminist perspective Results of this study demonstrate the importance of valuing women s lives as starting points for research and as generators of evidence for or against knowledge claims specifically as their lives relate to computer based technologies Women need to learn to value and network with other women in the use of technology These respondents early learning experiences reflect the cultural agenda and an absence of hands on science activities They also encounter gender oppression in many forms in their daily life experiences Although they all had opportunities to engage in computer learning at different stages of their life the time to learn and the opportunities to access computers were constraints that prevented further advancement These women educators predict positive futures for girls who are computer literate but warn of the potential of the increasing power of technology to divide women in our society into the haves and the have nots Implications and practical applications from
