

6 Strategies of **FUNCTIONAL COMMUNICATION TRAINING (FCT)**

Verbal Requests

Teaching a child to request a break verbally instead of acting out.

PECS

Allowing non-verbal children to use pictures to express needs, like showing a drink picture when thirsty.

Sign Language

Using basic sign language for needs, such as "eat" to express hunger.

Gestures

Encouraging simple gestures for communication, like pointing or waving for greetings.

Communication Devices

Using electronic devices or apps for children to communicate needs or feelings with button presses.

Choice Boards

Providing a choice board to help children make selections, reducing frustration and teaching decision-making.

This special issue of the journal Aphasiology is dedicated to the topic of quality of life in aphasia

The Clinical Science of Neurologic Rehabilitation Bruce H. Dobkin, 2003
The Second Edition of this single authored volume integrates multiple disciplines of basic and clinical research to help clinicians further develop the best possible care for the rehabilitation of patients with neurologic diseases From the readable descriptions of the structures and functions of pathways for movement and cognition the reader comes to understand the potential for training induced pharmacologic and near future biologic interventions to enhance recovery Dr Dobkin shows how functional neuroimaging serves as a marker for whether physical cognitive and neuromodulating therapies work and how they sculpt the plasticity of the brain Themes such as how the manipulation of sensory experience can serve as a formidable tool for rehabilitation run throughout the text built from the level of the synapse to behaviors such as grasping walking and thinking From illustrating how we may one day repair the brain and spinal cord to how to retrain spared and new pathways Dr Dobkin draws insights from a broad swath of fundamental research to give clinicians tools they can translate into bedside practices The book treats the medical complications and therapeutic approaches to neurologic diseases as an interconnected matrix The management of common medical issues impairments and disabilities are described across diseases Special problems posed by patients with stroke myelopathies brain injury multiple sclerosis degenerative diseases and motor unit disorders receive individual comment Short term and delayed pulse interventions for patients along with clinical trials are dissected and put into perspective The First Edition of this book was titled Neurologic Rehabilitation The title has been changed to reflect Dr Dobkin's sense that fundamental research now drives the field of neurologic rehabilitation even more than it could in 1996 when the First Edition was published The Second Edition features entirely new chapters on functional neuroimaging of recovery neurostimulators and neuroprostheses integration into the book of many new clinical and neuroscientific observations relevant to the clinician and extensive updating and expansion of all chapters Readers whether clinicians

serving the rehabilitation team or students or researchers in neuroscience neurology physical medicine allied health or bioengineering will acquire new insights and tools for creative pursuits that aim to lessen the disabilities of patients

Disability and Rehabilitation ,1996 Aphasia Rehabilitation Nadine Martin,Cynthia K. Thompson,Linda Worrall,2008
As a consequence of the disability movement the thinking generated by the World Health Organization s classification of disability and functioning and an upturn in concern for the long term consequences of aphasia it has become apparent that two distinctive pathways for the treatment of aphasia have emerged over the past decade The first and most traditional involves assessment and management directed toward lessening the effects of the impairment of aphasia while the second pathway focuses less on specific language than on the psychosocial consequences of aphasia This unique text specifically contrasts impairment and consequences focused treatment with the aim of providing clinicians with a level playing field that permits them to evaluate for themselves the relative contributions that each approach provides to evaluate their relative strengths and weaknesses and finally to seek common ground An opening chapter sets the scene while the heart of the book based on real cases concerns five meticulously described yet hypothetical individuals with aphasia In each of the cases detailed descriptions and assessment results are provided and clinical management plans representing each approach are presented internationally by recognized expert clinicians The Management of Acute Stroke Christopher Michael C.
