Galactic Cluster:

Star Formation in a Galactic Cluster M. M. Woolfson, 1979 *The Cambridge Guide to the Constellations* Michael E. Bakich, 1995-06-22 What figures do the constellations of the night sky represent What are the properties of the stars that they comprise And which constellations are new and which have become extinct This unique reference book gathers together more information on the constellations than any other single work to date The constellations can be readily compared and a general view of them developed using the tables that make up the first part of the book These tables provide a wealth of information covering all the essential properties of the constellations In the second part of the book each constellation is taken in turn with a star chart and map illustrating the associated celestial figure and supported by a comprehensive list of essential properties This highly illustrated volume provides the most complete reference to date covering all factual aspects of the constellations for astronomers both amateur and professional educators and science writers The author Michael Bakich is currently the Planetarium Director for Kansas City Museum He is an experienced writer and regularly writes columns for newspapers and the astronomy magazine *Sky and Telescope*

Burnham's Celestial Handbook, Volume Three Robert Burnham, 2013-04-15 Volume III of a comprehensive three part guide to celestial objects outside our solar system concludes with listings from Pavo to Vulpecula While there are many books on stars there is only one *Celestial Handbook* Now completely revised through 1977 this unique and necessary reference is available once again to guide amateur and advanced astronomers in their knowledge and enjoyment of the stars After an extensive introduction in Volume I which gives the beginner enough information to follow about 80 percent of the body of the material the author gives comprehensive coverage to the thousands of celestial objects outside our solar system that are within the range of telescopes in the two to twelve inch range The objects are grouped according to the constellations in which they appear Each constellation is divided into four subject sections list of double and multiple stars list of variable stars list of star clusters nebulae and galaxies and descriptive notes For each object the author gives names celestial coordinates classification and full physical description These together with a star atlas will help you find and identify almost every object of interest But the joy of the book is the descriptive notes that follow They cover history unusual movements or appearance and currently accepted explanations of such visible phenomena as white dwarfs novae and super novae cepheids mira type variables dark nebulae gaseous nebulae eclipsing binary stars the large Magellanic cloud the evolution of a star cluster and hundreds of other topics many of which are difficult to find in one place Hundreds of charts and other visual aids are included to help in identification Over 300 photographs capture the objects and are works of beauty that reflect the enthusiasm that star gazers have for their subject Robert Burnham Jr who was on the staff of the Lowell Observatory Flagstaff Arizona conceived the idea of *The Celestial Handbook* decades ago when he began assembling a notebook of all the major facts published about each celestial object In its former privately printed edition this handbook was acclaimed as one of the most helpful books for astronomers on any
