Foundations Of Parallel Programming A Machine Independent Approach:

Foundations of Parallel Programming Theodore Gyle Lewis,1993 Mathematics of Computing Parallelism Foundations of Parallel Programming D. B. Skillicorn,1994-12 The major reason for the lack of use of parallel computing is the mismatch between the complexity and variety of parallel hardware and the software development tools to program it The cost of the developing software needs to be amortised over decades but the platforms on which it executes change every few years requiring complete rewrites The evident cost effectiveness of parallel computation has not been realized because of this mismatch This book presents an integrated approach to parallel software development that addresses software issues and performance issues together It presents a methodology for software construction that produces software that is architecture independent and intellectually abstract The software can execute efficiently on a range of existing and potential hardware configurations The approach is based on the construction of categorical data types a generalisation of abstract data types and of objects Categorical data types abstract both from the representation of a data type and also from the detailed control flow necessary to perform operations on it They thus impose a strong separation between the semantics on which programs can depend and the implementation which is therefore free to hide the parallel machine properties that are used **New at the Energy Library** Energy Library,1991 **Euro-Par'97 Parallel Processing** Christian Lengauer,Martin Griebel,Sergei Gorlatch,2005-11-23 This book constitutes the refereed proceedings of the Third International Euro Par Conference held in Passau Germany in August 1997 The 178 revised papers presented were selected from more than 300 submissions on the basis of 1101 reviews The papers are organized in accordance with the conference workshop structure in tracks on support tools and environments routing and communication automatic parallelization parallel and distributed algorithms programming languages programming models and methods numerical algorithms parallel architectures HPC applications scheduling and load balancing performance evaluation instruction level parallelism database systems symbolic computation real time systems and an ESPRIT workshop Foundations of Parallel Programming Theodore Gyle Lewis,1993 Mathematics of Computing Parallelism *Gamoqenebit'i Mat'ematika Da Inp'ormatika* ,1997 **7th International Symposium on Software Reliability Engineering** IEEE Computer Society,1996 The proceedings of the Seventh International Symposium on Software Reliability Engineering held in White Plains New York in October November 1996 include a number of invited papers as well as panels and sessions treating the following topics promising software reliability engineering SRE technologies fault failure detection and tolerance business priorities distributed computing Java Web reliability and security issues and deploying SRE in an organization or company No subject index Annotation copyrighted by Book News Inc Portland OR Encyclopedia of Parallel Computing David Padua,2011-09-08 Containing over 300 entries in an A Z format the Encyclopedia of Parallel Computing provides easy intuitive access to relevant information for professionals and researchers seeking access to any aspect within the broad field of parallel computing Topics for this comprehensive
