Four Color Problem:

The Four-Color Theorem Rudolf Fritsch, Gerda Fritsch, 2012-12-06 During the university reform of the 1970s the classical Faculty of Science of the venerable Ludwig Maximilians Universität in Munich was divided into five smaller faculties One was for mathematics the others for physics chemistry and pharmaceuticals biology and the earth sciences Nevertheless in order to maintain an exchange of ideas between the various disciplines and so as not to permit the complete undermining of the original notion of universitas I the Carl Friedrich von Siemens Foundation periodically invites the professors from the former Faculty of Science to a luncheon gathering These are working luncheons during which recent developments in the various disciplines are presented by means of short talks The motivation for such talks does not come in the majority of cases from the respective subject itself but from another discipline that is loosely affiliated with it In this way the controversy over the modern methods used in the proof of the Four Color Theorem had also spread to disciplines outside of mathematics I as a trained algebraic topologist was asked to comment on this Naturally I was acquainted with the Four Color 1 A Latin word meaning the whole of something a collective entirety VII viii Preface Problem but up to that point had never intensively studied it As an outsider 2 I dove into the material not so much to achieve any scientific progress with it but to make this already achieved objective more understandable

The Four-Color Problem, 2011-08-29 The Four Color Problem [The Four-Color Theorem](#) Rudolf Fritsch, Gerda Fritsch, 1998 This elegant little book discusses a famous problem that helped to define the field now known as graph theory what is the minimum number of colors required to print a map such that no two adjoining countries have the same color no matter how convoluted their boundaries are Many famous mathematicians have worked on the problem but the proof eluded formulation until the 1970s when it was finally cracked with a brute force approach using a computer The Four Color Theorem begins by discussing the history of the problem up to the new approach given in the 1990s by Neil Robertson Daniel Sanders Paul Seymour and Robin Thomas The book then goes into the mathematics with a detailed discussion of how to convert the originally topological problem into a combinatorial one that is both elementary enough that anyone with a basic knowledge of geometry can follow it and also rigorous enough that a mathematician can read it with satisfaction The authors discuss the mathematics and point to the philosophical debate that ensued when the proof was announced just what is a mathematical proof if it takes a computer to provide one and is such a thing a proof at all

Graphs, Colourings and the Four-colour Theorem Robert Wilson, 2002 This textbook for mathematics undergraduates graduates and researchers discusses the proof of the four colour theorem one of the most famous of the long standing mathematical problems solved in the 20th century

Every Planar Map is Four Colorable Kenneth I. Appel, Wolfgang Haken, 1989 In this volume the authors present their 1972 proof of the

celebrated Four Color Theorem in a detailed but self contained exposition accessible to a general mathematical audience An emended version of the authors proof of the theorem the book contains the full text of the supplements and checklists which originally appeared on microfiche The thirty page introduction intended for nonspecialists provides some historical background of the theorem and details of the authors proof In addition the authors have added an appendix which treats in much greater detail the argument for situations in which reducible configurations are immersed rather than embedded in triangulations This result leads to a proof that four coloring can be accomplished in polynomial time

Four Colours Suffice Robin J. Wilson,2002 A puzzlers delight for over a century the four colour problem was one of the most famous conundrums in mathematics if not the most famous and many thousands of puzzlers amateur problem solvers and professional mathematicians alike have struggled to answer it The problem is simply stated and involves the colouring of maps Can every map be coloured with no more than four colours so that neighbouring countries are coloured differently
