## **Generalized Analytic Automorphic Forms In Hypercomplex Spaces:**

**Generalized Analytic Automorphic Forms in Hypercomplex Spaces** Rolf Sören Krausshar, 2004 *Generalized Analytic Automorphic Forms in Hypercomplex Spaces* Rolf Sören Krausshar, 2004 Invariant Probabilities of Markov-Feller Operators and Their Supports Radu Zaharopol, 2005-01-28 This book covers invariant probabilities for a large class of discrete time homogeneous Markov processes known as Feller processes These Feller processes appear in the study of iterated function systems with probabilities convolution operators and certain time series From the reviews A very useful reference for researchers wishing to enter the area of stationary Markov processes both from a probabilistic and a dynamical point of view MONATSHEFTE F R MATHEMATIK *Rings, Modules, and the Total* Friedrich Kasch, Adolf Mader, 2004-06-25 Accessible to anyone with a basic knowledge of ring and module theory A short introduction to torsion free Abelian groups is included *Topics in Clifford Analysis* Swanhild Bernstein, 2019-10-15 Quaternionic and Clifford analysis are an extension of complex analysis into higher dimensions The unique starting point of Wolfgang Sprossig's work was the application of quaternionic analysis to elliptic differential equations and boundary value problems Over the years Clifford analysis has become a broad based theory with a variety of applications both inside and outside of mathematics such as higher dimensional function theory algebraic structures generalized polynomials applications of elliptic boundary value problems wavelets image processing numerical and discrete analysis The aim of this volume is to provide an essential overview of modern topics in Clifford analysis presented by specialists in the field and to honor the valued contributions to Clifford analysis made by Wolfgang Sprossig throughout his career **Topics in Factorization of Abelian Groups** Sandor Szabo, 2004-10-25 The main objective of this book is to give a systematic exposition of the main results and techniques of the factorization theory of abelian groups The necessary background materials are presented along with some of the most important applications in geometry combinatorics coding theory and number theory A large part of the text is accessible to students requiring only basic knowledge in group theory and algebra Helpful exercises are provided in every chapter *Recent Advances in Computational and Applied Mathematics* Theodore E. Simos, 2010-10-10 This multi author contributed proceedings volume contains recent advances in several areas of Computational and Applied Mathematics Each review is written by well known leaders of Computational and Applied Mathematics The book gives a comprehensive account of a variety of topics including Efficient Global Methods for the Numerical Solution of Nonlinear Systems of Two point Boundary Value Problems Advances on collocation based numerical methods for Ordinary Differential Equations and Volterra Integral Equations Basic Methods for Computing Special Functions Melt Spinning Optimal Control and Stability Issues Brief survey on the CP methods for the Schrödinger equation Symplectic Partitioned Runge Kutta methods for the numerical integration of periodic and oscillatory problems Recent Advances in Computational and Applied Mathematics is aimed at advanced undergraduates and researchers who are working in these fast moving fields Gradient Flows Luigi

Ambrosio, Nicola Gigli, Giuseppe Savare, 2005-01-28 This book is devoted to a theory of gradient flows in spaces which are not necessarily endowed with a natural linear or differentiable structure It is made of two parts the first one concerning gradient flows in metric spaces and the second one devoted to gradient flows in the  $L^1$  Wasserstein space of probability measures on a separable Hilbert space  $X$  we consider the  $L^1$  Wasserstein distance as well The two parts have some connections due to the fact that the Wasserstein space of probability measures provides an important model to which the metric theory applies but the book is conceived in such a way that the two parts can be read independently the first one by the reader more interested to Non Smooth Analysis and Analysis in Metric Spaces and the second one by the reader more oriented to the applications in Partial Differential Equations Measure Theory and Probability

**Flag-transitive Steiner Designs**

Michael Huber, 2009-03-21 The characterization of combinatorial or geometric structures in terms of their groups of automorphisms has attracted considerable interest in the last decades and is now commonly viewed as a natural generalization of Felix Klein's Erlangen program 1872 In addition especially for finite structures important applications to practical topics such as design theory coding theory and cryptography have made the field even more attractive The subject matter of this research monograph is the study and classification of flag transitive Steiner designs that is combinatorial  $t$ - $v$ - $k$ -1 designs which admit a group of automorphisms acting transitively on incident point block pairs As a consequence of the classification of the finite simple groups it has been possible in recent years to characterize Steiner  $t$  designs mainly for  $t \geq 2$  admitting groups of automorphisms with sufficiently strong symmetry properties For Steiner 2 designs arguably the most general results have been the classification of all point 2 transitive Steiner 2 designs in 1985 by W M Kantor and the almost complete determination of all flag transitive Steiner 2 designs announced in 1990 by F Buekenhout A Delandtsheer J Doyen P B Kleidman M W Liebeck and J Saxl However despite the classification of the finite simple groups for Steiner  $t$  designs with  $t \geq 2$  most of the characterizations of these types have remained long standing challenging problems Specifically the determination of all transitive Steiner  $t$  designs with  $3 \leq t \leq 6$  has been of particular interest and object of research for more than 40 years

**Introductory Lectures on Automorphic Forms** Walter L. Baily Jr., 2015-03-08 Intended as an introductory guide this work takes for its subject complex analytic automorphic forms and functions on a domain equivalent to a bounded domain in a finite dimensional complex vector space usually denoted  $C^n$  Part I essentially elementary deals with complex analytic automorphic forms on a bounded domain it presents H Cartan's proof of the existence of the projective imbedding of the compact quotient of such a domain by a discrete group Part II treats the construction and properties of automorphic forms with respect to an arithmetic group acting on a bounded symmetric domain this part is highly technical and based largely on relevant results in functional analysis due to Godement and Harish Chandra In Part III Professor Baily extends the discussion

to include some special topics specifically the arithmetic properties of Eisenstein series and their connection with the arithmetic theory of quadratic forms Unlike classical works on the subject this book deals with more than one variable and it differs notably in its treatment of analysis on the group of automorphisms of the domain It is concerned with the case of complex analytic automorphic forms because of their connection with algebraic geometry and so is distinct from other modern treatises that deal with automorphic forms on a semi simple Lie group Having had its inception as graduate level lectures the book assumes some knowledge of complex function theory and algebra for the serious reader is expected to supply certain details for himself especially in such related areas as functional analysis and algebraic groups Originally published in 1973 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905 **The Yokohama Mathematical Journal** ,1967
