

SYMPTOMS OF COOLEY'S ANEMIA

No Symptoms

Silent carriers of alpha thalassemia usually don't have symptoms of the condition. This is because the lack of the protein called alpha-globin is so insignificant that the hemoglobin in the body still works normally.

Mild Anemia

People with the beta or alpha thalassemia traits may have mild anemia. But many people with these forms of thalassemia don't always have symptoms.

Mild-Moderate Anemia & Other Symptoms

People with beta-thalassemia intermedia can have mild or moderate anemia. They may also have other conditions like:

Bone problems: The bone marrow refers to the spongy matter inside bones that produces blood cells. Cooley's anemia can make the bone marrow expand. When it expands, the bones get wider than usual, which may make them brittle and easy to break.

Stunted growth and late puberty: Anemia may slow down or delay a child's growth and development.

An enlarged spleen: Thanks to the spleen, your body fights off infections and gets rid of unwanted material. When you have Cooley's anemia, your spleen has to work extra hard. This then makes the spleen grow bigger than normal, which worsens the anemia. If the spleen gets too big, it must be taken out.

Severe Anemia & Other Symptoms

People with Cooley's anemia or hemoglobin H disease have severe thalassemia. In fact, symptoms usually occur within the first 24 months. They could include severe anemia as well as other health conditions like:

- Bone problems (particularly with facial bones)
- An enlarged spleen, heart, or liver
- Jaundice (yellowish tinge on the skin or whites of eyes)
- Slowed growth and late puberty
- Poor appetite
- Dark urine (a sign of red blood cells breaking down)
- A pale, listless appearance
