## Final Session:

**BattleSpace of Mind** Michael Joseph McCarron, 2024-02-29 The Nazis never surrendered and planned their 4th Reich using neurocognitive weapons. Going underground, their technology made it's way to S America, the Soviet Union, the United States among other places. We all are bound by the new rules of corporate fascism long planned by Himmler and his main strategy for a 4th Reich: financial control. Are we all just living in a computer controlled information battlespace continued from World War II? This book dissects the matrix of control used by advanced military industrial powers; it breaks down the technology bit by bit so you have an understanding how technology is being used in a battle for your mind. I address these issues from a veteran's insight as a former Signal Intelligence specialist and with some background in the Intelligence Community. I bring forth countermeasures to this control, showing you how you can safeguard your mind from these attacks. Countermeasures that are not available anywhere in the commercial world yet; without them, you will be easy prey for these directed, targeted, pulse modulated attacks first used by the Nazis.

**Multitasking: Executive Functioning in Dual-Task and Task Switching Situations** Tilo Strobach, Mike Wendt, Markus Janczyk, 2018-03-27 Multitasking refers to performance of multiple tasks. The most prominent types of multitasking are situations including either temporal overlap of the execution of multiple tasks (i.e. dual tasking) or executing multiple tasks in varying sequences (i.e. task switching). In the literature, numerous attempts have aimed at theorizing about the specific characteristics of executive functions that control interference between simultaneously and/or sequentially active components of task sets in these situations. However, these approaches have been rather vague regarding explanatory concepts (e.g. task set inhibition, preparation, shielding, capacity limitation), widely lacking theories on detailed mechanisms and/or empirical evidence for specific subcomponents. The present research topic aims at providing a selection of contributions on the details of executive functioning in dual task and task switching situations. The contributions specify these executive functions by focusing on 1) fractionating assumed mechanisms into constituent subcomponents, 2) their variations by age or in clinical subpopulations, and/or 3) their plasticity as a response to practice and training.
