Extrasolar Planets:

Extrasolar Planets Rudolf Dvorak, 2008-06-25 This latest up to date resource for research on extrasolar planets covers formation dynamics atmospheres and detection After a look at the formation of giant planets the book goes on to discuss the formation and dynamics of planets in resonances planets in double stars atmospheres and habitable zones detection via spectra and transits and the history and prospects of ESPs as well as satellite projects Edited by a renowned expert in solar system dynamics with chapters written by the leading experts in the method described from the US and Europe this is an ideal textbook for graduates students in astronomy and astronomers

Extrasolar Planets Patrick Cassen, Tristan Guillot, A. Quirrenbach, 2007-05-17 Research on extrasolar planets is one of the most exciting fields of activity in astrophysics In a decade only a huge step forward has been made from the early speculations on the existence of planets orbiting other stars to the first discoveries and to the characterization of extrasolar planets This breakthrough is the result of a growing interest of a large community of researchers as well as the development of a wide range of new observational techniques and facilities Based on their lectures given at the 31st Saas Fee Advanced Course Andreas Quirrenbach Tristan Guillot and Pat Cassen have written up to date comprehensive lecture notes on the Detection and Characterization of Extrasolar Planets Physics of Substellar Objects Interiors Atmospheres Evolution and Protostellar Disks and Planet Formation This book will serve graduate students lecturers and scientists entering the field of extrasolar planets as detailed and comprehensive introduction

Extrasolar Planets Ron Miller, 2002-01-01 Chronicles the discoveries of all the planets within our solar system as well as planets beyond our system

Scientific Frontiers in Research on Extrasolar Planets Drake Deming, Sara Seager, Astronomical Society of the Pacific, 2003

Extrasolar Planets Stuart G. Clark, 1998-11-24 Provides an overview of the developments in the search for planetary sized bodies orbiting Sun like stars Discusses the formation and evolution of stars and the processes leading to the formation of protoplanetary discs planetesimals embryonic planets and complete planetary systems Also examined are the techniques currently being employed for the detection of extrasolar planets and the results of those searches as well as the theoretical problems posed by giant planets with small orbital radii and those in eccentric orbits brown dwarfs and the possible planets around pulsars The final chapter speculates on finding habitable and inhabited worlds Annotation copyrighted by Book News Inc Portland OR

Extrasolar Planets Jean-Philippe Beaulieu, Alain Lecavelier des Etangs, Caroline Terquem, 2004

Water in the Universe Arnold Hanslmeier, 2010-09-29 Due to its specific chemical and physical properties water is essential for life on Earth And it is assumed that this would be the case for extraterrestrial life as well Therefore it is important to investigate where water can be found in the Universe Although there are places that are completely dry places where the last rainfall happened probably several 100 million years ago surprisingly this substance is quite omnipresent In the outer solar system the large satellites of Jupiter and Saturn are covered by a thick layer of ice that could be hiding a liquid ocean below This of course brings up the question of whether the

recently detected extrasolar planets could have some water on their surfaces and how we can detect this Water molecules are also found in interstellar gas and dust clouds This book begins with an introductory chapter reviewing the physical and chemical properties of water Then it illuminates the apparent connection between water and life This is followed by chapters dealing with our current knowledge of water in the solar system followed by a discussion concerning the potential presence and possible detection of water on exoplanets The signature of water in interstellar space and stars are reviewed before the origin of water in the Universe is finally discussed The book ends with an appendix on detection methods satellite missions and astrophysical concepts touched upon in the main parts of the book The search for water in the Universe is related to the search for extraterrestrial life and is of fundamental importance for astrophysics astrobiology and other related topics This book therefore addresses students and researchers in these fields

Planet Hunter Vicki O. Wittenstein, 2010 He has discovered more planets than anyone in history In this inspiring true story winner of the American Institute of Physics Award Geoff Marcy's love of space helped him overcome struggles in his studies until finally he became an astronomer But he was not on track to make major discoveries Eventually he went back to the questions that thrilled him as a boy Are we alone Do Earth like planets orbit the stars in the night sky It would not be easy to find a planet outside our solarsystem Others had tried and failed But Marcy never gave up Since 1995 he and his colleagues have discovered nearly half of the 380 known extrasolar planets Stunning paintings transport the reader to the exotic worlds that he and others have found

Brown Dwarfs and Extrasolar Planets R. Rebolo, Eduardo L. Martin, Maria Rosa Zapatero Osorio, 1998 Proceedings of a March 1997 workshop with theoretical and observational papers in sections on free floating brown dwarfs substellar objects as companions to stars atmospheres and interiors and the mass function Subjects include rotation of field M dwarfs the formation of eccentric superplanets extrasolar comets in young stellar systems extrasolar giant planets spectroscopic properties of ultra cool dwarfs and brown dwarfs the stellar mass function and the mass of the Pleiades Annotation copyrighted by Book News Inc Portland OR

Planetary Systems Marc Ollivier, Thérèse Encrenaz, Françoise Roques, Franck Selsis, Fabienne Casoli, 2008-11-27 Over the past ten years the discovery of extrasolar planets has opened a new field of astronomy and this area of research is rapidly growing from both the observational and theoretical point of view The presence of many giant exoplanets in the close vicinity of their star shows that these newly discovered planetary systems are very different from the solar system New theoretical models are being developed in order to understand their formation scenarios and new observational methods are being implemented to increase the sensitivity of exoplanet detections In the present book the authors address the question of planetary systems from all aspects Starting from the facts the detection of more than 300 extraterrestrial planets they first describe the various methods used for these discoveries and propose a synthetic analysis of their global properties They then consider the observations of young stars and circumstellar disks and address the case of the solar system as a specific example different from the newly discovered systems Then the study of

planetary systems and of exoplanets is presented from a more theoretical point of view The book ends with an outlook to future astronomical projects and a description of the search for life on exoplanets This book addresses students and researchers who wish to better understand this newly expanding field of research The Blue Dot Workshop: Spectroscopic Search for Life on Extrasolar Planets, 1997 *Exoplanets* Sara Seager, 2011-01-15 For the first time in human history we know for certain the existence of planets around other stars Now the fastest growing field in space science the time is right for this fundamental source book on the topic which will lay the foundation for its continued growth Exoplanets serves as both an introduction for the non specialist and a foundation for the techniques and equations used in exoplanet observation by those dedicated to the field Extrasolar Planets and Their Host Stars Kaspar von Braun, Tabetha Boyajian, 2017-07-18 This book explores the relations between physical parameters of extrasolar planets and their respective parent stars Planetary parameters are often directly dependent upon their stellar counterparts In addition the star is almost always the only visible component of the system and contains most of the system mass Consequently the parent star heavily influences every aspect of planetary physics and astrophysics Drs Kaspar von Braun and Tabetha Boyajian use direct methods to characterize exoplanet host stars that minimize the number of assumptions needed to be made in the process The book provides a background on interferometric techniques for stellar diameter measurements illustrates the authors approach on using additional data to fully characterize the stars provides a comprehensive update on the current state of the field and examines in detail a number of historically significant and well studied exoplanetary systems Exoplanets and Alien Solar Systems Tahir Yaqoob, 2011 An unprecedented number of planets outside of the solar system have been found with an explosion in the number of discoveries in recent years Find out what has been happening in this rapidly advancing arena of human exploration what these extrasolar planets are like and why some traditional ideas face being thrown out
