Composition and Function of the Extracellular Matrix in the Human Body Francesco Travascio, 2016-06-15 The extracellular matrix ECM is an ensemble of non cellular components present within all tissues and organs of the human body The ECM provides structural support for scaffolding cellular constituents and biochemical and biomechanical support for those events leading to tissue morphogenesis differentiation and homeostasis Essential components of all ECMs are water proteins and polysaccharides However their composition architecture and bioactivity greatly vary from tissue to tissue in relation to the specific role the ECM is required to assume This book overviews the role of the ECM in different tissues and organs of the human body

Extracellular Matrix Protocols Sharona Even-Ram, Vira Artym, 2009-07-24 The study of the extracellular matrix ECM and its diverse roles in tissue scaffolding and cellular signaling in both physiological and pathological processes has significantly expanded over the past decade Although well appreciated the structural and biochemical complexity and the dynamic nature of the living matrix are still under extensive investigation yielding a growing number of methods with varying degree of sophistication and intricacy In this edition of Extracellular Matrix Protocols we compiled a variety of methods that can be readily reproduced in most cell biology laboratories as well as several cutting edge technologies that are indeed available in a limited number of centers but are well worth the awareness and exposure to the ECM research community As in the previous edition the book chapters are divided into sections that represent molecular biology techniques to study gene expression biophysical and biochemical methods for the analysis of structure and composition cell biology methods for the assessment of cell behavior and matrix assembly and tissue engineering applications All chapters were contributed by scientists who developed the methods or mastered and perfected methods that were routinely used in their laboratories An effort was made to provide practical working details and helpful notes for the nonexpert user in order to assist reproducibility and accuracy We hope that these valuable protocols will become helpful tools for ECM researchers and will be further developed and tailored to the specific needs of a growing number of applications

Extracellular Matrix in Development Douglas W. DeSimone, Robert Mecham, 2013-03-15 Cells in the developing embryo depend on signals from the extracellular environment to help guide their differentiation An important mediator in this process is the extracellular matrix secreted macromolecules that interact to form large protein networks outside the cell During development the extracellular matrix serves to separate adjacent cell groups participates in establishing morphogenic gradients and through its ability to interact directly with cell surface receptors provides developmental clocks and positional information This volume discusses how the extracellular matrix influences fundamental developmental processes and how model systems can be used to elucidate ECM function The topics addressed range from how ECM influences early development as well as repair processes in the adult that recapitulate developmental pathways

[The Extracellular Matrix and Ground Regulation](#) Alfred Pischinger, 2007-07-17 The workings of the suitable environment for cells called the extracellular matrix ECM and ground regulation has occupied the European medical tradition since the early part of the 20th century As it has become more clear that the origin of disease and its first signals register in the connective tissue or myofascia cellular pathologists and biochemists have sought to circumscribe networks of cell communication and microcirculation in the ECM Alfred Pischinger 1899 1982 continued this line of work by further studying in work published from 1926 through the late seventies the connections of the ECM to the hormonal and autonomic systems In the last twenty years Professor and Doctor of Natural Sciences Hartmut Heine and his colleagues have carried on Pischinger's work here summarized in one volume Part One encompasses theoretical underpinnings Parts Two and Three address applications and directions for further research This updated English language translation not only is an

account of the work of Pischinger's successors Heine Otto Bergsmann and Felix Perger the three editors of this volume and their many colleagues but notes the positive development of complementary therapies based on this understanding of histology Acupuncture is referenced directly Both in Europe and the States the work of manual therapists including Rolfers cranio sacral therapists and other somatic disciplines have been informed for many years by Pischinger's outsider model of how changes in the EMC register in the central nervous system and the brain and are conveyed back to the periphery and connected organs Heine's exciting recent work shows that the regulation and construction of the ECM have relationships to cybernetic non linear systems and phase transitions

Extracellular Matrix Susan Hawkes, 2012-12-02 *Extracellular Matrix* contains the proceedings of the symposium The Extracellular Matrix sponsored by the Michigan Molecular Institute and held in Midland Michigan on June 28 July 2 1982 The papers explore the role played by the extracellular matrix ECM in the physiology of a cell particularly in the regulation of cellular phenotypes differentiation and proliferation The progress made in isolating and defining the chemistry and functional interactions of the ECM components is discussed along with the biology of the ECM This book is comprised of 52 chapters and begins with an introduction to the ECM with emphasis on the question of whether the malignant process can be defined in a cell culture model and in particular whether the pericellular matrix is characteristically altered in cancer The discussion then turns to the structure of the heparan sulfate proteoglycans and the molecular mechanisms responsible for the association of these molecules with the surfaces of cultured cells Subsequent chapters focus on the chemistry of ECM components such as collagen glycosaminoglycans and adhesive glycoproteins along with their functional interactions biosynthesis turnover and degradation The final section is devoted to the diseased states of ECM This monograph should serve as a valuable reference for biochemists as well as undergraduate and graduate students of biochemistry
