Graphs Codes And Designs:

Designs, Graphs, Codes and Their Links P. J. Cameron, J. H. van Lint, 1991-09-19 Although graph theory design theory and coding theory had their origins in various areas of applied mathematics today they are to be found under the umbrella of discrete mathematics Here the authors have considerably reworked and expanded their earlier successful books on graphs codes and designs into an invaluable textbook They do not seek to consider each of these three topics individually but rather to stress the many and varied connections between them The discrete mathematics needed is developed in the text making this book accessible to any student with a background of undergraduate algebra Many exercises and useful hints are included throughout and a large number of references are given

Graphs, Codes and Designs P. J. Cameron, J. H. van Lint, 1980-07-31 This book is concerned with the relations between graphs error correcting codes and designs in particular how techniques of graph theory and coding theory can give information about designs A major revision and expansion of a previous volume in this series this account includes many examples and new results as well as improved treatments of older material So that non specialists will find the treatment accessible the authors have included short introductions to the three main topics This book will be welcomed by graduate students and research mathematicians and be valuable for advanced courses in finite combinatorics

Graphs, Codes and Designs Peter Jephson Cameron, Jacobus Hendricus van Lint, School of Mathematical Sciences Peter J Cameron, 2014-05-14 This book is concerned with the relations between graphs error correcting codes and designs in particular how techniques of graph theory and coding theory can give information about designs A major revision and expansion of a previous volume in this series this account includes many examples and new results as well as improved treatments of older material So that non specialists will find the treatment accessible the authors have included short introductions to the three main topics This book will be welcomed by graduate students and research mathematicians and be valuable for advanced courses in finite combinatorics

Designs and Graphs Charles J. Colbourn, Dieter Jungnickel, Alexander Rosa, 1992 In 1988 the news of Egmont Kouml hler s untimely death at the age of 55 reached his friends and colleagues It was widely felt that a lasting memorial tribute should be organized The result is the present volume

containing forty two articles mostly in combinatorial design theory and graph theory and all in memory of Egmont Kouml hler Designs and graphs were his areas of particular interest he will long be remembered for his research on cyclic designs Skolem sequences t designs and the Oberwolfach problem Professors Lenz and Ringel give a detailed appreciation of Kouml hler s research in the first article of this volume There is however one aspect of Egmont Kouml hler s biography that merits special attention Before taking up the study of mathematics at the age of 31 he had completed training as a musician studying both composition and violoncello at the Musikhochschule in Berlin and worked as a cellist in a symphony orchestra for some years This accounts for his interest in the combinatorial aspects of music His work and lectures in this direction had begun to attract the interest of many musicians and he had commenced work on a book on mathematical aspects of musical theory It is tragic indeed that his early death prevented the completion of his work the surviving paper on the classification and complexity of chords indicates the loss that his death meant to the area as he was almost uniquely qualified to bring mathematics and music together being a professional in both fields

LDPC Code Designs, Constructions, and Unification Juane Li, Shu Lin, Khaled Abdel-Ghaffar, William E. Ryan, Daniel J. Costello, Jr, 2016-12-01 Written by leading experts this self contained text provides systematic coverage of LDPC codes and their construction techniques unifying both algebraic and graph based approaches into a single theoretical framework the superposition construction An algebraic method for constructing protograph LDPC codes is described and entirely new codes and techniques are presented These include a new class of LDPC codes with doubly quasi cyclic structure as well as algebraic methods for constructing spatially and globally coupled LDPC codes Authoritative yet written using accessible language this text is essential reading for electrical engineers computer scientists and mathematicians working in communications and information theory

Graph Theory, Coding Theory, and Block Designs Peter Jephson Cameron, Jacobus Hendricus van Lint, 1975 These are notes deriving from lecture courses given by the authors in 1973 at Westfield College London The lectures described the connection between the theory of t designs on the one hand and graph theory on the other A feature of this book is the discussion of then recent construction of t designs from codes Topics from a wide range of finite combinatorics are covered and the book will interest all scholars of combinatorial theory
