Fireproofing: Chemistry, Technology and Applications Pierre Thiéry,1970 *Chemical Technology and Informatics in Chemistry with Applications* Alexander V. Vakhrushev,Omari V. Mukbaniani,Heru Susanto,2019-01-15 This volume reflects the huge breadth and diversity in research and the application of industrial and engineering chemistry and cheminformatics The book presents cutting edge research developments and new insights that emphasize the vibrancy of industrial and engineering chemistry and cheminformatics today The first section of the book focuses on new insights in engineering chemistry while the second part looks at the promising future and novel approaches in chemical informatics which has vast implications for industrial and pharmaceutical applications Several chapters examine various industrial processes for emerging materials and determine practical use under a wide range of conditions helping to establish what is needed to produce a new generation of materials

Fire Retardancy of Polymeric Materials Charles A. Wilkie,Alexander B. Morgan,2024-07-29 The third edition of *Fire Retardancy of Polymeric Materials* provides a single source for all aspects of this highly challenging field of applied research This authoritative book covers design and non fire requirements that drive how these materials are fire protected Detailed study and consideration of chemistry physics materials science economic issues and fire safety science is necessary to address considerations of mechanical thermal environmental and end use requirements on top of fire protection means that the field requires This thoroughly revised new edition continues to offer comprehensive coverage of the scientific approach for those developing fire safe materials It covers new topics such as bio based materials regulatory issues recycling newer flame retardant chemical classes and more details on how to flame retard materials for specific market applications Written by a team of experts this book covers the fundamentals of polymer burning and combustion and how to apply fire protection or flame retardant chemistries to specific material classes and applications The book is written for material scientists and fire safety scientists who seek to develop new fire safe materials or understand why materials burn in our modern environment Features Connects fundamentals of material flammability to practical fire safety needs Covers current fire safety requirements and regulations affecting flame retardant selection Provides information on chemical structure property relationships for flame retardancy Provides practical guidance on how to design fire safe materials for specific fire risk scenarios The new edition is expanded to 32 chapters and all chapters are updated and revised with the newest information

Fire Retardancy of Polymeric Materials, Second Edition Charles A. Wilkie,Alexander B. Morgan,2009-12-10 When dealing with challenges such as providing fire protection while considering cost mechanical and thermal performance and simultaneously addressing increasing regulations that deal with composition of matter and life cycle issues there are no quick one size fits all answers Packed with comprehensive coverage scientific approach step by step directions and a distillation of technical knowledge the first edition of *Fire Retardancy of Polymeric Materials* broke new ground It supplied a one stop resource for the development of new fire safe materials The editors have expanded the second

edition to echo the multidisciplinary approach inherent in current flame retardancy technology and put it in a revised more user friendly format More than just an update of previously covered topics this edition discusses additional fire retardant chemistry developments in regulations and standards new flame retardant approaches fire safety engineering modeling and fire growth phenomena The book introduces flame retardants polymer by polymer supplemented by a brief overview of mode of action and interaction and all the other ancillary issues involved in this applied field of materials science The book delineates what why and how to do it covering the fundamentals of polymer burning combustion and how to apply these systems and chemistries to specific materials classes It also provides suggested formulations discusses why certain materials are preferred for particular uses or applications and offers a starting point from which to develop fire safe materials

Theory of Flame Retardation of Polymeric Materials Li Jianjun, Ou Yuxiang, 2019-08-19 Flame retardant materials are of vital importance in guaranteeing personal security Especially the demand for non toxic low smoking polymerized flame retardants increases and new materials enter the market The authors present the fundamental theory of polymer combustion compare different flame retardants describe smoke suppression mechanisms and explain analyzing techniques for new materials

The Chemical Technology of Textile Fibres Georg von Georgievics, 1902 PREFACE IN the present volume dealing with the Chemical Technology of the Textile Fibres except as concerns the dye stuffs which will be treated in a separate work the author has been obliged to condense the available matter as much as possible in order to preserve the form of a text book Nevertheless it seemed necessary in certain cases in the interests of the book to give definite data and an exact description of individual processes In such instances the details have been gathered exclusively either from the authors personal experience or from reliable sources The most important part of the book is the chapter treating of dyeing whilst on the other hand the subject of printing had to be dealt with in a more general fashion the materials being less suitable for treatment in text book style The author thinks it desirable to point out that in the present work an attempt has been made to completely separate the chemical and mechanical technology of the subject a standpoint he considers justified by the extensive area occupied by each of these branches Hence only a few sketches of apparatus have been given and the methods of dressing the finished goods have been described very briefly since they almost entirely belong to the domain of mechanical technology
