**First-Order Logic and Automated Theorem Proving** Melvin Fitting, 2012-12-06 There are many kinds of books on formal logic Some have philosophers as their intended audience some mathematicians some computer scientists Although there is a common core to all such books they will be very different in emphasis methods and even appearance This book is intended for computer scientists But even this is not precise Within computer science formal logic turns up in a number of areas from program verification to logic programming to artificial intelligence This book is intended for computer scientists interested in automated theorem proving in classical logic To be more precise yet it is essentially a theoretical treatment not a how to book although how to issues are not neglected This does not mean of course that the book will be of no interest to philosophers or mathematicians It does contain a thorough presentation of formal logic and many proof techniques and as such it contains all the material one would expect to find in a course in formal logic covering completeness but not incompleteness issues The first item to be addressed is What are we talking about and why are we interested in it We are primarily talking about truth as used in mathematical discourse and our interest in it is or should be self evident Truth is a semantic concept so we begin with models and their properties These are used to define our subject *Automated Theorem Proving in Software Engineering* Johann M. Schumann, 2013-06-29 Growing demands for the quality safety and security of software can only be satisfied by the rigorous application of formal methods during software design This book methodically investigates the potential of first order logic automated theorem provers for applications in software engineering Illustrated by complete case studies on protocol verification verification of security protocols and logic based software reuse this book provides techniques for assessing the prover's capabilities and for selecting and developing an appropriate interface architecture

**Automated Deduction - CADE-18** Andrei Voronkov, 2002-07-17 The First CADE in the Third Millennium This volume contains the papers presented at the Eighteenth International Conference on Automated Deduction CADE 18 held on July 27-30th 2002 at the University of Copenhagen as part of the Federated Logic Conference FLoC 2002 Despite a large number of deduction related conferences springing into existence at the end of the last millennium the CADE conferences continue to be the major forum for the presentation of new research in all aspects of automated deduction CADE 18 was sponsored by the Association for Automated Reasoning CADE Inc the Department of Computer Science at Chalmers University the Gesellschaft für Informatik Safelogic AB and the University of Koblenz Landau There were 70 submissions including 60 regular papers and 10 system descriptions Each submission was reviewed by at least five program committee members and an electronic program committee meeting was held via the Internet The committee decided to accept 27 regular papers and 9 system descriptions One paper switched its category after refereeing thus the total number of system descriptions in this volume is 10 In addition to the refereed papers this volume contains an extended abstract of the CADE invited talk by Ian Horrocks the joint CADE CAV invited talk by Sharad Malik and the joint CADE TABLEAUX invited talk by Matthias Baaz One

more invited lecture was given by Daniel Jackson

**The Resolution Calculus** Alexander Leitsch, 2012-12-06 The History of the Book In August 1992 the author had the opportunity to give a course on resolution theorem proving at the Summer School for Logic Language and Information in Essex The challenge of this course a total of five two hour lectures consisted in the selection of the topics to be presented Clearly the first selection has already been made by calling the course resolution theorem proving instead of automated deduction In the latter discipline a remarkable body of knowledge has been created during the last 35 years which hardly can be presented exhaustively deeply and uniformly at the same time In this situation one has to make a choice between a survey and a detailed presentation with a more limited scope The author decided for the second alternative but does not suggest that the other is less valuable Today resolution is only one among several calculi in computational logic and automated reasoning However this does not imply that resolution is no longer up to date or its potential exhausted Indeed the loss of the monopoly is compensated by new applications and new points of view It was the purpose of the course mentioned above to present such new developments of resolution theory Thus besides the traditional topics of completeness of refinements and redundancy aspects of termination resolution decision procedures and of complexity are treated on an equal basis

**Martin Davis on Computability, Computational Logic, and Mathematical Foundations** Eugenio G. Omodeo, Alberto Policriti, 2017-01-27 This book presents a set of historical recollections on the work of Martin Davis and his role in advancing our understanding of the connections between logic computing and unsolvability The individual contributions touch on most of the core aspects of Davis work and set it in a contemporary context They analyse discuss and develop many of the ideas and concepts that Davis put forward including such issues as contemporary satisfiability solvers essential unification quantum computing and

generalisations of Hilbert's tenth problem. The book starts out with a scientific autobiography by Davis and ends with his responses to comments included in the contributions. In addition, it includes two previously unpublished original historical papers in which Davis and Putnam investigate the decidable and the undecidable side of Logic, as well as a full bibliography of Davis' work. As a whole, this book shows how Davis' scientific work lies at the intersection of computability, theoretical computer science, foundations of mathematics, and philosophy, and draws its unifying vision from his deep involvement in Logic.

This monograph provides an intensive course for graduate students in computer science, as well as others interested in extensions of logic programming, on the theoretical foundations of disjunctive logic programming. Disjunctive logic programming permits the description of indefinite or incomplete information through a disjunction of atoms in the head of a clause. The authors describe model theoretic semantics, proof theoretic semantics, and fix point semantics for disjunctive and normal disjunctive programs. A normal disjunctive program permits negated atoms in the body of a clause and presents theories of negation. They conclude with selected applications to knowledge databases. Jorge Lobo is Assistant Professor in Computer Science at the University of Illinois, Chicago Circle. Jack Minker is Professor in the Department of Computer Science and Institute for Advanced Computer Studies at the University of Maryland. Arcot Rajasekar is Assistant Professor in the Computer Science Department at the University of Kentucky.
