

Figure 7.11 (a) A minimum cut in proof of (7.40). (b) The same cut after moving node y to the A' side. The edges crossing the cut are dark.

don't have to be concerned about nodes $x \in X$ that are not in A . The two ends of the edge (x, y) will be on different sides of the cut, but this edge does not add to the capacity of the cut, as it goes from B' to A' .)

Next consider the capacity of this minimum cut (A', B') that has $\Gamma(A) \subseteq A'$ as shown in Figure 7.11(b). Since all neighbors of A belong to A' , we see that the only edges out of A' are either edges that leave the source s or that enter the sink t . Thus the capacity of the cut is exactly

$$c(A', B') = |X \cap B'| + |Y \cap A'|.$$

Notice that $|X \cap B'| = n - |A|$, and $|Y \cap A'| \geq |\Gamma(A)|$. Now the assumption that $c(A', B') < n$ implies that

$$n - |A| + |\Gamma(A)| \leq |X \cap B'| + |Y \cap A'| = c(A', B') < n.$$

Comparing the first and the last terms, we get the claimed inequality $|A| > |\Gamma(A)|$. ■

7.6 Disjoint Paths in Directed and Undirected Graphs

In Section 7.1, we described a flow f as a kind of "traffic" in the network. But our actual definition of a flow has a much more static feel to it: For each edge e , we simply specify a number $f(e)$ saying the amount of flow crossing e . Let's see if we can revive the more dynamic, traffic-oriented picture a bit, and try formalizing the sense in which units of flow "travel" from the source to

established and emerging researchers working in these and other related fields This series of conferences is unique in recognising the relation between the two main themes of artificial neural networks and genetic algorithms each having its origin in a natural process fundamental to life on earth and each now well established as a paradigm fundamental to continuing technological development through the solution of complex industrial commercial and financial problems This is well illustrated in this volume by the numerous applications of both paradigms to new and challenging problems The third key theme of the series therefore is the integration of both technologies either through the use of the genetic algorithm to construct the most effective network architecture for the problem in hand or more recently the use of neural networks as approximate fitness functions for a genetic algorithm searching for good solutions in an incomplete solution space i e one for which the fitness is not easily established for every possible solution instance
