

WELFARE IMPACTS OF EQUAL-YIELD TAX REFORMS IN THE UK ECONOMY¹

Abstract

A sixteen sector dynamic general equilibrium tax model with and without announcement effects for open and closed capital markets is used to evaluate efficiency gains and transitional effects from equal yield tax reforms for seven different taxes in the UK economy. Impacts of an unanticipated tax reform on investment, capital accumulation, output and employment are compared to those of anticipated tax reforms. Households, producers, traders, investors and the government are found to be more capable of adjusting their economic behaviour when tax announcements are made in advance. Large intertemporal responses by consumer and producer cause higher growth rates of capital and output in a free international borrowing and lending scenarios with no pre-announcement of tax reform programme. Growth rates are higher when the government follows intertemporal balance in its budget rather than balancing it in each period. In equal yield constraint reliance in more efficient tax rate reduces effective rate of other taxes and welfare gains of up to 1.4 percent of life time income can occur by removing distortions in taxes. Welfare loss of up to 2.05 percent of it can happen if a less distortionary tax, such as the labour income tax is replaced by more distortionary taxes. These simulation results hold whether the capital markets are closed or open. Model presented here can be used to evaluate dynamic macro economic impacts of sector specific policies over time.
