Abstract. The ability for providing a hardware platform which can be customized on a per-application basis under software control has established *Reconfigurable Computing (RC)* as a new computing paradigm. A machine employing the RC paradigm is referred to as a *Field-Programmable Custom Computing Machine (FCCM)*. So far, the FCCMs have been classified according to implementation criteria. For the previous classifications do not reveal the entire meaning of the RC paradigm, we propose to classify the FCCMs according to architectural criteria. To analyze the phenomena inside FCCMs, we introduce a formalism based on microcode, in which any custom operation performed by a field-programmed computing facility is executed as a microprogram with two basic stages: SET CONFIGURATION and EXECUTE CUSTOM OPERATION. Based on the SET/EXECUTE formalism, we then propose an architectural-based taxonomy of FCCMs.

1 Introduction

The ability of providing a hardware platform which can be transformed under software control has established *Reconfigurable Computing (RC)* [28], [42], [29] as a new computing paradigm in the last ten years. According to this paradigm, the main idea in improving the performance of a computing machine is to define custom computing resources on a per-application basis, and to dynamically configure them onto a *Field-Programmable Gate Array (FPGA)* [11]. As a general view, a computing machine working under the new RC paradigm typically includes a *General-Purpose Processor (GPP)* which is augmented with an FPGA. The basic idea is to exploit both the GPP flexibility to achieve medium performance for a large class of applications, and FPGA capability to implement application-specific computations. Such a hybrid is referred to as a *Field-Programmable Custom Computing Machine (FCCM)* [7], [16].

Various FCCMs have been proposed in the last decade. Former attempts in classifying FCCMs used implementation criteria [15], [31], [26], [47], [23], [38]. As the user observes only the architecture of a computing machine [4], the previous classifications do not seize well the implications of the new RC paradigm as perceived
