Gene Civilization:

The Gene Civilization François Gros, François Gros, 1992 **Genetic Enslavement** Bruce L. Gary, 2011-06 Every living thing is assembled by its genes This is a crucial starting point for exploring a fundamental human dilemma As stated so starkly by Richard Dawkins a human is a lumbering machine created for the task of safeguarding and propagating the all important genes within I would add that since the machine s behavior is driven by brain circuits pre wired by those genes sometimes we are prone to doing things which work against our individual best interest in order to advance the cause of the genes In other words some of our genes are our enemies outlaw genes because they jeopardize individual well being as they work to assure themselves genetic immortality Every thinking person must face the following dilemma How can I achieve liberation from genetic pitfalls when my values and thinking are so profoundly influenced by the very same genes that have created those pitfalls The more one tries to answer this question the harder it is to imagine that an answer is possible Nevertheless this is a challenge that can become irresistibly fascinating This book is an attempt to bravely explore one of Humanity s most profound existential dilemmas The fate of a civilization is also affected by the outlaw genes especially those responsible for a feeling of discontent with civilization and a vague preference for a simpler society which I would describe as resembling those found in the human ancestral environment This book explores how a flawed human nature undermines every civilization starting a decline and eventual fall Those of us born during the 20th Century are lucky for having seen the best of times for our civilization and as a questionable bonus we may now witness from close up the forces that have condemned every past civilization to ruin *The Life Cycle of Civilizations* Stephen Blaha, 2002 This book is an expanded version of *The Rhythms of History* the book that made macro History into a semi quantitative Science New features include 1 an appendix showing how the history of Mayan civilization conforms to the book s Theory of Civilizations including the latest information from the newly discovered hieroglyphic texts at Dos Pilas Guatemala 2 an appendix on the sub Saharan African civilization Great Zimbabwe showing it fits the theory 3 a comparison of the theory with Toynbee s observations showing the many new features resulting from a quantitative theory 4 numerous historic pictures and illustrations of the civilizations of Mankind including a number of newly found pictures from the nineteenth century 5 a chapter describing the potentially disturbing implications of patterns in civilizations Are we free and the implications for the Philosophy of History and 6 expanded comments in many sections such as the sections on the future of Humanity the role of China and the Islamic West conflict The book begins with a hard hitting tell it like it is chapter on the current international situation with statements such as The United States and Western civilization is now engaged in a small Vietnam style war on a global scale at the time of this writing This war is still in the early stages of development The attack on the World Trade Center by Muslim terrorists may have the same significance for Western civilization that the Gothic invasion of Rome itself in the prime of the Empire the First Century AD had for the future of Rome They may be a premonition of things to come not necessarily soon but perhaps

in a few centuries The Goths returned three centuries later and remained as permanent conquerors Over the long term the West must free itself from a dependence on Muslim oil Muslim oil revenues are the fuel for the development of weapons of mass destruction by Iran and Iraq In the future they will supply the revenues of an expansionist Islam As the silk trade looted the Roman Empire of its gold and reduced its economy the trade in oil is looting the West of its prosperity and freedom of action The rise and fall of oil prices has a significantly greater effect on the American and world economy than the raising and lowering of interest rates by central banks The book then describes a theory of civilizations that led to these observations Currently unfolding events seem to be fulfilling the predictions which were made last year including the new North Korean threat that seems to be consistent with a predicted breakdown in Japan North Korea will create major problems with Japan As this is being written Japan is moving Aegis destroyers nearer to North Korea and preparing for defense THE EVENTS DESCRIBED IN THIS BOOK AND ITS PREDECESSOR APPEAR TO BE HAPPENING AS PREDICTED LAST YEAR According to Theory of Civilizations the basis of civilizations was laid with a genetic mutation found by Ding et al 40 000 years ago that created bold enterprising individuals who became the leadership group of civilizations a group that Toynbee called the creative minority When the world's climate became warmer and more stable 10 000 years ago the seeds of civilizations began to germinate Thus the origin of civilizations is tied to human genetics The book then shows that a long term social behavior pattern of mankind based on four generation trends causes civilizations to develop and oscillate in patterns of routs and rallies Civilizations rise and fall due to their internal human dynamics The theory of civilization is developed using equations and 68 diagrams that show a close detailed match between the theory and the actual history of all known Asian European and African civilizations over the last 5 500 years The theory projects the future of today's civilizations including the future of Western and Islamic civilizations It also successfully describes the interaction of barbarians and civilizations the interaction of two civilizations the impact of modern technology on civilizations it accounts for the Luddite reaction to the Industrial Revolution the impact of major environmental events on civilizations e g the collapse of Minoan civilization due to a volcanic eruption and the disintegration of civilizations It also accounts for the tremendous growth phases seen in many civilizations such as the building of the great pyramids in Egyptian civilizations Based on the theory fifteen new civilizations are identified including new prehistoric Chinese and Egyptian civilizations Having shown the success of the theory for earth civilizations it considers the form of extraterrestrial civilizations and calculates their impact on Western civilization should contact be established The book also shows the need for the colonization of space and nearby planets if mankind is to progress in the future The book analyzes the impact of the lengthening life spans of mankind on the future of civilizations Predictions are made for the state of the world for 2050 and 2100 A detailed understanding the past enables the theory of civilizations to make predictions for the future Defining Progress to be the sum of the world's civilizations the book shows that Progress seems to be approximately linearly increasing over the last 5 500 years A plot of Progress appears on the book

s cover shown on this web page together with the contributions of each civilization to Progress The vertical order of the civilizations in the plot is arbitrary Older civilizations tend to be lower in the plot The book is a tour de force that makes History a Science rather than a collection of random events It is the first detailed mathematical treatment of history Although the book contains mathematics it is intended for the general reader as well as the mathematically inclined There are copious verbal descriptions of the theory as well as many figures plotting the theory versus historical events A qualitative descriptive theory of civilizations is also presented that is like a Dow Theory of Civilizations

The Historical Dynamics of Chinese Politics Guangbin Yang, 2022-07-02 This book puts forward a new perspective the historical dynamics of Chinese politics for better understanding China's politics which is from the vertical history of China and the dimension of horizontal world politics combining the historical analysis of how Chinese politics has come along the way and the comparative analysis of China's governance achievements in world politics Based on this premise this book attempts to explain the democratic discourse of contemporary Chinese political logic The historical dynamics of Chinese politics comes from long term communication between the author and Western scholars which may help the global audience to understand China's politics from all angles

The 10,000 Year Explosion Gregory Cochran, Henry Harpending, 2009 Two leading researchers make the controversial argument that the human species is still measurably evolving in important ways in fact faster than ever before

Civilization's Crisis: A Set Of Linked Challenges John Scales Avery, 2017-04-20 Modern civilization faces a broad spectrum of daunting problems but rational solutions are available for them all This book explores the following issues 1 Threats to the environment and climate change 2 a growing population and vanishing resources 3 the global food and refugee crisis 4 intolerable economic inequality 5 the threat of nuclear war 6 the military industrial complex and 7 limits to growth These problems are closely interlinked and their possible solutions are discussed in this book

High-Impact Respiratory RNA Virus Diseases, Volume II Victor Manuel Petrone-García, Inkar Alejandro Castellanos-Huerta, 2026-01-30 Due to the remarkable success of the Research Topic High Impact Respiratory RNA Virus Diseases and the rapidly evolving subject area we are pleased to launch Volume II for this topic The threat posed by avian influenza to humans today the possibility of a coronavirus associated with severe acute respiratory syndrome SARS reemerging and the discovery of numerous novel respiratory viruses highlight the need for the creation of therapeutic and preventative measures to fend off viral infection The development of vaccines is essential for preventing the spread of viral illnesses as well as for lowering the morbidity and fatality rates related to various viral infections The development of effective vaccinations against newly developing viral diseases will proceed more quickly thanks to the lessons learnt from ongoing vaccine research and our growing understanding of the host and viral components involved in viral pathogenesis RNA viruses have a high mutation rate due to the error prone nature of the viral RNA dependent RNA polymerase The gradual accumulation of non synonymous mutations in the virus genome results in antigenic drift and vaccination failure

Most pathologies caused by RNA viruses have respiratory tract infection as their entry route and invade epithelia such as digestive renal and reproductive RNA viruses such as orthomyxoviruses coronaviruses and paramyxoviruses cause severe disease and a high mortality rate in birds and mammals including humans despite vaccination Viral respiratory tract pathologies in animal production environments with a high concentration of animals and a greater opportunity for spreading diseases and viral infections the ongoing exchange of RNA viruses particularly from animals to humans poses a serious global health risk In addition RNA viral diseases cause significant losses to livestock and working animal producers and have detrimental consequences on animal welfare The Research Topic welcomes papers describing all aspects of respiratory diseases caused by RNA viruses in mammals and birds including molecular interactions between pathogens and hosts environmental changes immunity and disease prevention We encourage the submission of manuscripts that explore themes such as but not limited to Description of respiratory virus infections in domestic animals Pathobiology of viral infections Pathogenesis of viral infections Host immune response of viral infections Biosafety of viral infections Novel vaccine development for respiratory virus infections The Leadership of Civilization Building Richard J. Spady,2002 The Origin of Race and Civilization, Or an Exposé of the False Christian Doctrines and Distorted Historical and Scientific Teachings Regarding the Origins of the Species of Life, Human and Subhuman Races, Adamic Man, Israelites, Cultures and Civilizations Charles A.
