Scientific Inquiry Cycle: Review

Science helps communities solve problems by applying knowledge and inventing thinking. After "brain" work with a local issue, such as water quality or waste management, using critical thinking to assess or improve solutions can have a positive impact. Understanding the problem fully, including its causes and effects, is the first step in finding an effective resolution.

Designing solutions becomes considering various conditions, such as budget, time, and safety concerns. Community members have a part of a solution right from the beginning, and this important step helps build effective solutions. For students, creating solutions for a issue that they affect in real and safe of use, can influence the effectiveness of the solution.

After identifying a solution, determining how it works, what conditions affected it, and any compromises that have already been and already involve on the idea. Communication, using critical thinking, and reflecting on the results of the solution are important steps. This process helps the community become locally empowered, responsible decision-making, and better communication, too.

 - Using the most expensive materials
 - Ignoring safety concerns
 - Understanding the problem fully
2. What does brainstorming contribute to a solution-help with?
- Using the products of the solution
 - Establishing a solution (the design) and safety
 - Showing how to solve
 - Demonstrating that the solution has no risks
3. Which is an example of a trade-off?
- Finding a solution with no risks
 - Using the most expensive materials
 - Using unsafe materials
 - Using unsafe materials
4. Why is compromise important?
- To avoid not being in agreement
 - To make ideas stronger
 - To finish the problem by combining
 - To avoid discussing the risks

6B. Mark if the statement is True (T) or False (F).

1. A solution made after one failed attempt is usually better than one that is made after several failed attempts.

Answer for each question.

1. Is a solution made after one failed attempt usually better than one that is made after several failed attempts?

2. Why must this be considered in designing a solution?
