Insects and Human Life Brian Morris, 2020-05-26 This pioneering book looks at the importance of insects to culture. While in the developed West a good deal of time and money may be spent trying to exterminate insects, in other cultures human insect relations can be far more subtle and multi-faceted. Like animals, insects may be revered or reviled, and in some tribal communities insects may be the only source of food available. How people respond to, make use of, and relate to insects speaks volumes about their culture. In an effort to get to the bottom of our vexed relationship with the insect world, Brian Morris spent years in Malawi, a country where insects proliferate and people contend. In Malawi, as in many tropical regions, insects have a profound impact on agriculture, the household, disease, and medicine, and hence on oral literature, music, art, folklore, recreation, and religion. Much of the complexity of human insect relations rests on paradox: insects may represent the source of contagion, but they are also integral to many folk remedies for a wide range of illnesses. They may be at the root of catastrophic crop failure, but they can also be a form of sustenance. Weaving science with personal observations, Morris demonstrates a profound and intimate knowledge of virtually every aspect of human insect relations. Not only is this book extraordinarily useful in terms of the more practical side of entomology, it also provides a wealth of information on the role of insects in cultural production. Malawian proverbs alone provide many such delightful examples: *Bemberezi adziwa nyumba yake*. The carpenter bee knows his own home. This final volume in Morris' trilogy on Malawi's animal and insect worlds is certain to become a classic study of uncharted territory: the insect world that surrounds us and how we relate to it. Praise for *The Power of Animals*. Although based upon examination of a single culture, Morris incorporates ecological and anthropological concepts that expand this study of

[Bees in Early Modern Transatlantic Literature](#) Nicole A. Jacobs, 2020-11-29 This book examines apian imagery: bees, drones, honey, and the hive in the seventeenth and eighteenth-century literary and oral traditions. In England and the New World colonies during a critical period of expansion, the metaphor of this communal society faced unprecedented challenges, even as it came to emblemize the process of colonization itself. The beehive connected the labor of those marginalized by race, class, gender, or species to larger

considerations of sovereignty This study examines the works of William Shakespeare Francis Daniel Pastorius Hopi
Wyandotte and Pocasset cultures John Milton Hester Pulter and Bernard Mandeville Its contribution lies in its exploration of
the simultaneously recuperative and destructive narratives that place the bee at the nexus of the human the animal and the
environment The book argues that bees play a central representational and physical role in shaping conflicts over hierarchies
