Tools for Institutional, Political, and Social Analysis of Policy Reform, 2007-01-01 Analysis of the distributional impact of policy reforms plays an important role in the elaboration and implementation of poverty reduction strategies in developing and transitional countries promoting evidence based policy choices and fostering debate on policy reform options International agencies and national partners are increasingly encouraging a more systematic application of policy reform analysis Requisite to a systematic application is capacity building within countries as well as within donor agencies Tools for Institutional Political and Social Analysis of Policy Reform A Sourcebook for Development Practitioners contributes to this agenda by introducing a framework and a set of practical tools that analyze the institutional political and social dimensions of policy design and implementation The authors fill a perceived gap in knowledge of the application of social tools and complement existing guidance on conventional economic analysis of distributional impacts of reform This book will be of interest to commissioners and practitioners working in policy analysis in a range of areas including macroeconomic sectoral and public sector policy that are subject to ongoing policy reform discussions BOOK JACKET *Autodesk Maya 2020 Simulation and Effects Book* Serdar Hakan DÜZGÖREN, Bullet Rigid and Soft Body Dynamics The Bullet physics engine lets you create large scale highly realistic dynamic and kinematic simulations You can use Bullet to create content for rendered animations for film and visualization as well as for the setup of game engine and real time simulations The Bullet plug in provides seamless mapping of Bullet objects to Maya objects The controls to the Bullet objects are exposed in Maya Objects and the interaction follows the typical Maya dynamics paradigm Bullet Physics is an open source collision detection rigid body and soft body dynamics library The library provides a collection of objects each corresponding to the various aspects of dynamic simulations For example the Bullet solver rigid bodies soft bodies and constraints are all unique Bullet objects

Computational Materials Chemistry L.A. Curtiss, M.S. Gordon, 2006-01-16 As a result of the advancements in algorithms and the huge increase in speed of computers over the past decade electronic structure calculations have evolved into a valuable tool for characterizing surface species and for elucidating the pathways for their formation and reactivity It is also now possible to calculate including electric field effects STM images for surface structures To date the calculation of such images has been dominated by density functional methods primarily because the computational cost of curate wave function based calculations using either realistic cluster or slab models would be prohibitive DFT calculations have proven especially valuable for elucidating chemical processes on silicon and other semiconductor surfaces However it is also clear that some of the systems to which DFT methods have been applied have large non dynamical correlation effects which may not be properly handled by the current generation of Kohn Sham based density functionals For example our CASSCF calculations on the Si 001 acetylene system reveal that at some geometries there is extensive 86 configuration mixing This in turn could signal problems for DFT cal lations on these systems Some of these problem systems can be addressed using ONIOM or other layering methods treating the primary region of interest with a CASMP2 or other multireference based method and treating the secondary region by a lower level of electronic structure theory or by use of a molecular mechanics method
