## *Net Foreign Factor income- NFFI*

Net foreign factor income = US citizens income earned abroad minus foreign citizens income earned in US.

Similar to how we included imports in C, I and G in the expenditure approach and subtracted it out later, when wages, rent, interest and profit are earned it includes those values for all nationals, whether the funds are earned in the US or abroad. BUT, GDP is a measure of production within the borders. National income was income of nationals in and out of the border. SOOOOO, we have to subtract out the income of US citizens that was earned abroad. Plus income earned by foreigners working here must be added because they worked in the domestic economy. This means we have national income minus NFFI so far in our income approach to GDP.
