Evolutionary Computation In Combinatorial Optimization:

Recent Advances in Evolutionary Computation for Combinatorial Optimization Carlos Cotta, Jano van Hemert, 2008-09-08 Combinatorial optimisation is a ubiquitous discipline whose usefulness spans vast applications domains. The intrinsic complexity of most combinatorial optimisation problems makes classical methods unaffordable in many cases. To acquire practical solutions to these problems requires the use of metaheuristic approaches that trade completeness for pragmatic effectiveness. Such approaches are able to provide optimal or quasi optimal solutions to a plethora of difficult combinatorial optimisation problems. The application of metaheuristics to combinatorial optimisation is an active field in which new theoretical developments, new algorithmic models and new application areas are continuously emerging. This volume presents recent advances in the area of metaheuristic combinatorial optimisation with a special focus on evolutionary computation methods. Moreover, it addresses local search methods and hybrid approaches. In this sense, the book includes cutting edge theoretical, methodological, algorithmic and applied developments in the field from respected experts and with a sound perspective. [Evolutionary Computation in Combinatorial Optimization](#) Arnaud Liefooghe, Manuel López-Ibáñez, 2018-03-23 This book constitutes the refereed proceedings of the 18th European Conference on Evolutionary Computation in Combinatorial Optimization EvoCOP 2018 held in Parma, Italy, in April 2018, co-located with the Evo 2018 events EuroGP, EvoMUSART and EvoApplications. The 12 revised full papers presented were carefully reviewed and selected from 37 submissions. The papers cover a wide spectrum of topics ranging from the foundations of evolutionary computation algorithms and other search heuristics to their accurate design and application to both single and multi objective combinatorial optimization problems. Fundamental and methodological aspects deal with runtime analysis, the structural properties of fitness landscapes, the study of metaheuristics core components, the clever design of their search principles and their careful selection and configuration by means of automatic algorithm configuration and hyper heuristics. Applications cover conventional academic domains such as NK landscapes, binary quadratic programming, traveling salesman, vehicle routing or scheduling problems and also include real world domains in clustering, commercial districting and winner determination. **Evolutionary Computation in Combinatorial Optimization** Luís Paquete, Christine Zarges, 2020-04-09 This book constitutes the refereed proceedings of the 20th European Conference on Evolutionary Computation in Combinatorial Optimization EvoCOP 2020 held as part of Evo 2020 in Seville, Spain, in April 2020, co-located with the Evo 2020 events EuroGP, EvoMUSART and EvoApplications.
