Functional Assessment of Wetlands E. Maltby, 2009-04-27 Wetlands perform functions that deliver benefits to society often referred to as ecosystem services These ecosystem services include water supply flood regulation water purification climate regulation biodiversity agriculture e g grazing land and amenity A functional approach to wetland assessment enables a holistic view to be taken of the wide range of services wetlands can provide The functional assessment procedures FAPs in this volume translate best available scientific knowledge into reasonable predictions of how component parts of wetlands function in different landscape contexts They can be used to indicate the potential and priorities for management options in such areas as flood control pollution reduction and biodiversity conservation Functional assessment enables the user to predict the functioning of a wetland area without the need for comprehensive and expensive empirical research The FAPs therefore provide a methodology that can be used by both experts and non experts to assess wetland functioning relatively rapidly The volume includes an electronic version of the FAPs on CD which automates aspects of the assessment once the initial recording stage is completed It is anticipated that the FAPs will be used by a range of individuals or organisations concerned with wetland management who wish to gain a better understanding of the processes functions services or benefits and potential of the wetlands for which they have responsibility Provides a systematic methodology to evaluate how wetlands function Allows non experts to assess wetland functioning rapidly and cost effectively Automates aspects of the functional assessment through the accompanying CD ROM
