Geometry Driven Diffusion In Computer Vision:

Geometry-Driven Diffusion in Computer Vision Bart M. Haar Romeny, 2013-03-14 Scale is a concept the antiquity of which can hardly be traced. Certainly the familiar phenomena that accompany scale changes in optical patterns are mentioned in the earliest written records. The most obvious topological changes such as the creation or annihilation of details have been a topic to philosophers, artists, and later scientists. This appears to be the case for all cultures from which extensive written records exist. For instance, Chinese 17th-century artist manuals remark that distant faces have no eyes. The merging of details is also obvious to many authors. For example, Lucretius mentions the fact that distant islands look like a single one. The one topological event that is to the best of my knowledge mentioned only late by John Ruskin in his *Elements of Drawing* of the mid 19th century is the splitting of a blob on blurring. The change of images on a gradual increase of resolution has been a recurring theme in the arts. For example, the poetic description of the distant armada in Calderon's *The Constant Prince* and this mystery as Ruskin calls it is constantly exploited by painters.

Geometric Partial Differential Equations and Image Analysis Guillermo Sapiro, 2006-02-13 This book provides an introduction to the use of geometric partial differential equations in image processing and computer vision. This research area brings a number of new concepts into the field, providing a very fundamental and formal approach to image processing. State-of-the-art practical results in a large number of real problems are achieved with the techniques described in this book. Applications covered include image segmentation, shape analysis, image enhancement, and tracking. This book will be a useful resource for researchers and practitioners. It is intended to provide information for people investigating new solutions to image processing problems, as well as for people searching for existing advanced solutions.
