Evolutionary Patterns And Processes:

Evolutionary Patterns and Processes D. R. Lees, Dianne Edwards, 1993 Evolution is the central theme of all biology Research in the many branches of evolutionary study continues to flourish This book based on a symposium of the Linnean Society discusses the diversity in current evolutionary research It approaches the subject ambitiously and from several angles bringing together eminent authors from a variety of disciplines paleontologists traditionally with a macroevolutionary bias neontologists concentrating on microevolutionary processes and those studying the very essence of evolution the process of speciation in living organisms *Evolutionary Patterns and Processes* will appeal to a broad spectrum of professional biologists working in such fields as paleontology population biology and evolutionary genetics Biologists will enjoy chapters by Stephen J Gould discovering in the much earlier work of Hugo de Vries parallels with his ideas on punctuational evolution Guy Bush considering why there are so many small animals Peter Sheldon examining detailed fossil trilobite sequences for evidence of microevolutionary processes and considering models of speciation as well as others dealing with cytological ecological and behavioral processes leading to the evolution of new species None

Patterns and Processes of Vertebrate Evolution Robert Lynn Carroll, 1997-04-28 The factors that influenced the evolution of the vertebrates are compared with the importance of variation and selection that Darwin emphasised in this broad study of the patterns and forces of evolutionary change *Evolutionary Patterns* Alan H. Cheetham, 2001-08 This text demonstrates the rich variety of clues to evolution that can be gleaned from the fossil record Contributors explore modes of development the tempo of speciation and extinction and macroevolutionary patterns and trends *Phylogenetic Patterns and the Evolutionary Process* Niles Eldredge, Joel Cracraft, 1980 *Evolutionary Patterns and Processes* (London). New Approaches to Speciation in the Fossil Record Douglas H. Erwin,Robert L. Anstey,1995 New Approaches to Speciation in the Fossil Record provides the most up to date and comprehensive examination of recent advances in the analysis of speciation since then This collection of case studies seeks to reexamine the understanding of the speciation patterns that appear in the fossil record through stringent analysis of the patterns and their presumed processes The contributions address the questions of speciation by conducting specific detailed studies of particular lineages The rigorous techniques of morphological analysis quantitative genetic analysis phylogenetic analysis and sedimentary completeness are employed to offer a fresh look at speciation New Approaches to Speciation in the Fossil Record is divided into three sections The first part gives a historical perspective on the issues under consideration and explores the current debates and future directions for research In Part II five case studies describe speciation patterns while raising significant methodological issues for further inquiry The third section looks at the large scale macroevolutionary issues that affect patterns in the fossil record The new perspectives revealed here make this a unique resource for students teachers and professionals in the fields of paleontology and evolutionary biology
