Econometric Inference Using Simulation Techniques:

Econometric Inference Using Simulation Techniques Herman K. van Dijk, Alain Monfort, Bryan W. Brown, 1995-07-11
This book provides a comprehensive assessment of the latest simulation techniques and examines the three main areas of econometric inference where the use of simulation methods has been successful Bayesian inference classical inference and the solution and stochastic simulation of dynamic econometric models in particular general equilibrium models

Econometric Inference Using Simulation Techniques Herman Van Dijk, 1995-10-01 Special issue on econometric inference using simulation techniques Bryan W. Brown, 1993 Simulation-based Inference in Econometrics Roberto Mariano, Til Schuermann, Melvyn J. Weeks, 2000-07-20 This substantial volume has two principal objectives First it provides an overview of the statistical foundations of Simulation based inference This includes the summary and synthesis of the many concepts and results extant in the theoretical literature the different classes of problems and estimators the asymptotic properties of these estimators as well as descriptions of the different simulators in use Second the volume provides empirical and operational examples of SBI methods Often what is missing even in existing applied papers are operational issues Which simulator works best for which problem and why This volume will explicitly address the important numerical and computational issues in SBI which are not covered comprehensively in the existing literature Examples of such issues are comparisons with existing tractable methods number of replications needed for robust results choice of instruments simulation noise and bias as well as efficiency loss in practice Monte Carlo Simulation for Econometricians Jan F. Kiviet, 2012 Monte Carlo Simulation for Econometricians presents the fundamentals of Monte Carlo simulation MCS pointing to opportunities not often utilized in current practice especially with regards to designing their general setup controlling their accuracy recognizing their shortcomings and presenting their results in a coherent way The author explores the properties of classic econometric inference techniques by simulation The first three chapters focus on the basic tools of MCS After treating the basic tools of MCS Chapter 4 examines the crucial elements of analyzing the properties of asymptotic test procedures by MCS Chapter 5 examines more general aspects of MCS such as its history possibilities to increase its efficiency and effectiveness and whether synthetic random exogenous variables should be kept fixed over all the experiments or be treated as genuinely random and thus redrawn every replication The simulation techniques that we discuss in the first five chapters are often addressed as naive or classic Monte Carlo methods However simulation can also be used not just for assessing the qualities of inference techniques but also directly for obtaining inference in practice from empirical data Various advanced inference techniques have been developed which incorporate simulation techniques An early example of this is Monte Carlo testing which corresponds to the parametric bootstrap technique Chapter 6 highlights such techniques and presents a few examples of semi parametric bootstrap techniques This chapter also demonstrates that the bootstrap is not an alternative to MCS but just another practical inference technique which uses simulation to produce econometric

inference Each chapter includes exercises allowing the reader to immerse in performing and interpreting MCS studies The material has been used extensively in courses for undergraduate and graduate students The various chapters all contain illustrations which throw light on what uses can be made from MCS to discover the finite sample properties of a broad range of alternative econometric methods with a focus on the rather basic models and techniques [The Econometrics of Panel Data](#) László Mátyás,Patrick Sevestre,2013-12-01 The aim of this volume is to provide a general overview of the econometrics of panel data both from a theoretical and from an applied viewpoint Since the pioneering papers by Edwin Kuh 1959 Yair Mundlak 1961 Irving Hoch 1962 and Pietro Balestra and Marc Nerlove 1966 the pooling of cross sections and time series data has become an increasingly popular way of quantifying economic relationships Each series provides information lacking in the other so a combination of both leads to more accurate and reliable results than would be achievable by one type of series alone Over the last 30 years much work has been done investigation of the properties of the applied estimators and test statistics analysis of dynamic models and the effects of eventual measurement errors etc These are just some of the problems addressed by this work In addition some specific difficulties associated with the use of panel data such as attrition heterogeneity selectivity bias pseudo panels etc have also been explored The first objective of this book which takes up Parts I and II is to give as complete and up to date a presentation of these theoretical developments as possible Part I is concerned with classical linear models and their extensions Part II deals with nonlinear models and related issues logit and probit models latent variable models duration and count data models incomplete panels and selectivity bias point processes and simulation techniques **Handbook of Computational Econometrics** David A. Belsley,Erricos Kontoghiorghes,2009-08-18 Handbook of Computational Econometrics examines the state of the art of computational econometrics and provides exemplary studies dealing with computational issues arising from a wide spectrum of econometric fields including such topics as bootstrapping the evaluation of econometric software and algorithms for control optimization and estimation Each topic is fully introduced before proceeding to a more in depth examination of the relevant methodologies and valuable illustrations This book Provides self contained treatments of issues in computational econometrics with illustrations and invaluable bibliographies Brings together contributions from leading researchers Develops the techniques needed to carry out computational econometrics Features network studies non parametric estimation optimization techniques Bayesian estimation and inference testing methods time series analysis linear and nonlinear methods VAR analysis bootstrapping developments signal extraction software history and evaluation This book will appeal to econometricians financial statisticians econometric researchers and students of econometrics at both graduate and advanced undergraduate levels *The Econometrics of Panel Data* László Mátyás,Patrick Sevestre,2008-04-06 This restructured updated Third Edition provides a general overview of the econometrics of panel data from both theoretical and applied viewpoints Readers discover how econometric tools are used to study organizational and household behaviors as well as

other macroeconomic phenomena such as economic growth The book contains sixteen entirely new chapters all other chapters have been revised to account for recent developments With contributions from well known specialists in the field this handbook is a standard reference for all those involved in the use of panel data in econometrics

Simulation Based Bayesian Econometric Inference Lennart F. Hoogerheide, Herman K. van Dijk, Rutger D. van Oest, 2007

Stochastic Processes: Modeling and Simulation D N Shanbhag, Calyampudi Radhakrishna Rao, 2003-02-24 This sequel to volume 19 of Handbook on Statistics on Stochastic Processes Modelling and Simulation is concerned mainly with the theme of reviewing and in some cases unifying with new ideas the different lines of research and developments in stochastic processes of applied flavour This volume consists of 23 chapters addressing various topics in stochastic processes These include among others those on manufacturing systems random graphs reliability epidemic modelling self similar processes empirical processes time series models extreme value theory applications of Markov chains modelling with Monte Carlo techniques and stochastic processes in subjects such as engineering telecommunications biology astronomy and chemistry particular with modelling simulation techniques and numerical methods concerned with stochastic processes The scope of the project involving this volume as well as volume 19 is already clarified in the preface of volume 19 The present volume completes the aim of the project and should serve as an aid to students teachers researchers and practitioners interested in applied stochastic processes

Financial Risk Management with Bayesian Estimation of GARCH Models David Ardia, 2008-05-08 This book presents in detail methodologies for the Bayesian estimation of single regime and regime switching GARCH models These models are widespread and essential tools in financial econometrics and have until recently mainly been estimated using the classical Maximum Likelihood technique As this study aims to demonstrate the Bayesian approach offers an attractive alternative which enables small sample results robust estimation model discrimination and probabilistic statements on nonlinear functions of the model parameters The author is indebted to numerous individuals for help in the preparation of this study Primarily I owe a great debt to Prof Dr Philippe J Deschamps who inspired me to study Bayesian econometrics suggested the subject guided me under his supervision and encouraged my research I would also like to thank Prof Dr Martin Wallmeier and my colleagues of the Department of Quantitative Economics in particular Michael Beer Roberto Cerratti and Gilles Kaltenrieder for their useful comments and discussions I am very indebted to my friends Carlos Ord as Criado Julien A Straubhaar Jerome Ph A Taillard and Mathieu Vuilleumier for their support in the fields of economics mathematics and statistics Thanks also to my friend Kevin Barnes who helped with my English in this work Finally I am greatly indebted to my parents and grandparents for their support and encouragement while I was struggling with the writing of this thesis
