Inorganic and Organic Thin Films Yujun Song, 2021-04-21 Learn more about foundational and advanced topics in polymer thin films and coatings besides species with this powerful two volume resource The two volume Inorganic and Organic Thin Films Fundamentals Fabrication and Applications delivers a foundational resource for current researchers and commercial users involved in the design and fabrication of thin films The book offers newcomers to the field a thorough description of new design theory fabrication methods and applications of advanced thin films Readers will discover the physics and chemistry underlying the manufacture of new thin films and coatings in this leading new resource that promises to become a handbook for future applications of the technology This one stop reference brings together all important aspects of inorganic and polymeric thin films and coatings including construction assembly deposition functionality patterning and characterization Explorations of their applications in industries as diverse as information technology new energy biomedical engineering aerospace and oceanographic engineering round out this fulsome exploration of one of the most exciting and rapidly developing areas of scientific and industrial research today Readers will also learn from A comprehensive introduction to the progress of thin films and coatings as well as fundamentals in functional thin films and coatings An exploration of multi layered magnetic thin films for electron transport control and signal sensing including giant magnetoresistance colossal magnetoresistance tunneling magnetoresistance and the quantum anomalous Holzer effect An in time summary of high quality magneto optics nanophotonics spin waves and spintronics using bismuth substituted iron garnet thin films as examples A thorough discussion of template assisted fabrication of nanostructure thin films for ultrasensitive detection of chemicals and biomolecules A treatment of biomass derived functional films and coatings Perfect for materials scientists and inorganic chemists Inorganic and Organic Thin Films will also earn a place in the libraries of solid state physicists and physical chemists working in private industry as well as polymer and surface chemists who seek to improve their understanding of thin films and coatings

[Introduction to Ultrafast Phenomena](#) Guo-ping Zhang, Georgios Lefkidis, Mitsuko Murakami, Wolfgang Hübner, Thomas F. George, 2020-12-08 This book the first of this kind provides a comprehensive introduction to ultrafast phenomena covering the fundamentals of ultrafast spin and charge dynamics femtosecond magnetism all optical spin switching and high harmonic generation It covers the experimental tools including ultrafast pump probe experiments and theoretical methods including quantum chemistry and density functional theory both time independent and time dependent The authors explain in clear language how an ultrafast laser pulse is generated experimentally how it can induce rapid responses in electrons and spins in molecules nanostructures and solids magnetic materials and superconductors and how it can create high harmonic generation from atoms and solids on the attosecond timescale They also show how this field is driving the next generation of magnetic storage devices through femtomagnetism all optical spin switching in ferrimagnets and beyond magnetic logic in magnetic molecules and ultrafast intense light

sources incorporating numerous computer programs examples and problems throughout to show how the beautiful research can be done behind the scene Key features Provides a clear introduction to modern ultrafast phenomena and their applications in physics chemistry materials sciences and engineering Presents in detail how high harmonic generation occurs in atoms and solids Explains ultrafast demagnetization and spin switching a new frontier for development of faster magnetic storage devices Includes numerous worked out examples and problems in each chapter with real research codes in density functional theory and quantum chemical calculations provided in the chapters and in the Appendices This book is intended for undergraduate and graduate students researchers in physics chemistry biology materials sciences and engineering

Congo Basin Hydrology, Climate, and Biogeochemistry Raphael M. Tshimanga, Guy D. Moukandi N'kaya, Douglas Alsdorf, 2022-03-22 New scientific discoveries in the Congo Basin as a result of international collaborations The Congo is the world's second largest river basin and home to 120 million people Understanding the cycling of water sediments and nutrients is important as the region faces climatic and anthropogenic change Congo Basin Hydrology Climate and Biogeochemistry A Foundation for the Future explores variations in and influences on rainfall hydrology and hydraulics and sediment and carbon dynamics It features contributions from experts in the region and their international collaborators Volume highlights include New in situ and remotely sensed measurements and model results Use of historic data to assess precipitation and hydrologic changes Exploration of water exchange between wetlands and rivers Biogeochemical processes in the Congo's forests and wetlands A scientific foundation for hydrologic resource management in the region Studies from different parts of the Congo river and its adjoining basins This book is available in English and French The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity Its publications disseminate scientific knowledge and provide resources for researchers students and professionals Find out more about this book in this short video and this article
